CHAPTER 1

About the System

What the system does

The BSU Integrated Inventory Monitoring System keeps the stock records of each office: what comes in, what goes out, what is borrowed, what is about to expire, and what is left. It replaces paper stock cards and hand-made monthly summaries, and it produces the official Appendix 58 stock card and the monthly Summary Report.

- **Every office keeps its own records.** You only see the products, stock and requests of the office your account belongs to.
- **Stock is tracked by batch.** Each delivery becomes a batch with its own barcode, cost and expiry date. When stock goes out, the oldest batch is used first (first in, first out).
- **Nothing is lost.** Every sign-in, stock movement, correction, approval and setting change is written to an audit log that nobody can edit or delete.
- **It works on the office network.** No internet is needed to use it. Computers, tablets and phones only need a web browser.

Roles at a glance

What you can do depends on your role. Your manager or technical staff assign it when they approve your account.

Role	What you do in the system	Read
Staff	Request the items your work needs, follow your requests, browse the item catalog and see the transaction log.	Ch. 2, 3
Custodian	Keep the stock records of your office: record stock in and out, decide on staff requests, lend items, run physical counts, manage products and barcodes, and produce reports.	Ch. 2, 4
Manager	Everything a custodian does, plus running the office: approving accounts, maintaining the lists the system uses, setting report signatories, making and restoring backups, and reviewing the audit log.	Ch. 2, 4, 5
Technical Staff	Look after accounts and offices across the whole system, set up the system email, and review the audit log of every office. Inventory pages are not shown to this role.	Ch. 2, 6

Throughout this manual, labels like Staff Custodian Manager Technical Staff show who a section is for.

Opening the system

Open a web browser (Chrome, Edge or Firefox) and type the address your office uses for the system, for example `https://192.168.1.10/`. Ask your technical staff for the exact address and bookmark it.

Use the secure address (https://)
The camera barcode scanner only works when the system is opened with its `https://` address. If the browser shows a certificate warning on a new device, ask technical staff to install the office certificate on it.

CHAPTER 2

Getting Started

For everyone. How to get an account, sign in, find your way around and keep your account safe.

Creating an account

1. On the sign-in page, click **Create a New Account**.
2. Fill in your first, middle and last name, a username, your email address and a password (twice). Choose the **Level of Access** (role) and the **User Office** you are requesting.
3. Submit the form. Your account is now **pending**: you can't sign in yet.
4. Your office manager (or technical staff, for manager accounts) is notified and activates your account. After that you can sign in.

Signing in

1. Enter your **Username or Email** and your **Password**.
2. Click **Sign In**.

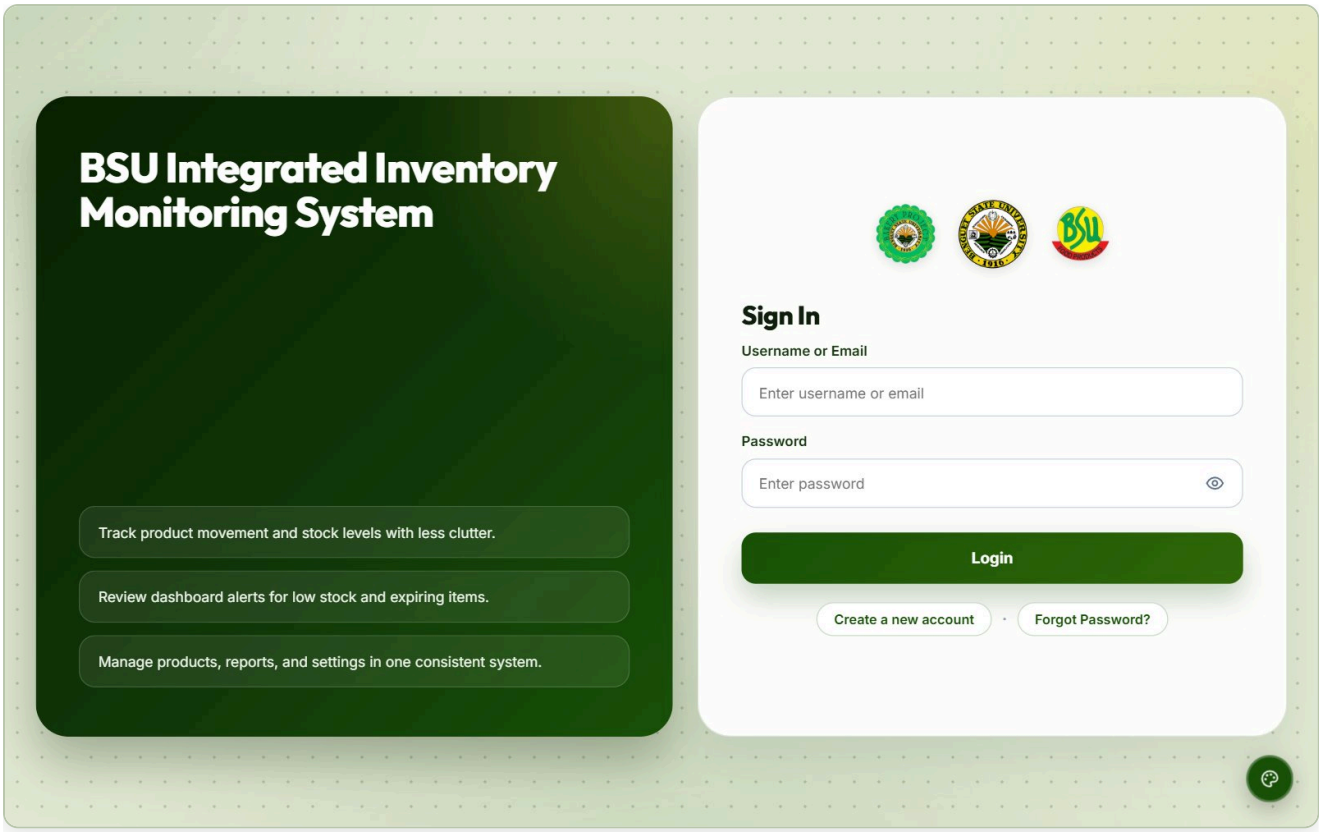

Figure 1. *The sign-in page. New users start with "Create a new account".*

> **Too many wrong passwords**
> After 5 wrong passwords, sign-ins to that account from your device are paused for 15 minutes. You can still sign in from another device, or use **Forgot Password?**.

Your first sign-in

The first time you sign in, and whenever technical staff have given you a temporary password, the system asks you to **Change Your Password** before you can open any other page.

A password needs:

- at least 8 characters,
- an uppercase letter, a lowercase letter and a number,
- no runs of numbers such as `123` or `654`.

Forgot your password

1. On the sign-in page, click **Forgot Password?**.
2. Enter the email address on your account and click **Send Code**.
3. Open your email. Enter the **6-Digit Code** you received. It expires after 15 minutes; click **Send a new code** if it did.
4. Choose your new password, enter it twice, and save. Sign in with the new password.

> **No email, or no internet?**
> Ask technical staff to set a temporary password for you. You will be asked to choose your own password the next time you sign in.

Finding your way around

The bar at the top of every page has:

- **Menu**: every page you can use, grouped by task. You only see the pages your role allows.
- **The bell**: your notifications, in three tabs (see Chapter 7).
- **The theme button**: switches between the BSU, Dark and Light colours.
- **The question-mark button**: opens the **Help & User Guide** from any page. On a phone, it is under Menu.
- **Your name**: opens My Profile.

Pages keep themselves up to date. When someone else submits a request, accepts one, records stock or signs up, the page you have open and the bell update within a few seconds. You don't need to refresh. New requests, decisions on your requests and new sign-ups also pop up briefly at the bottom of the screen.

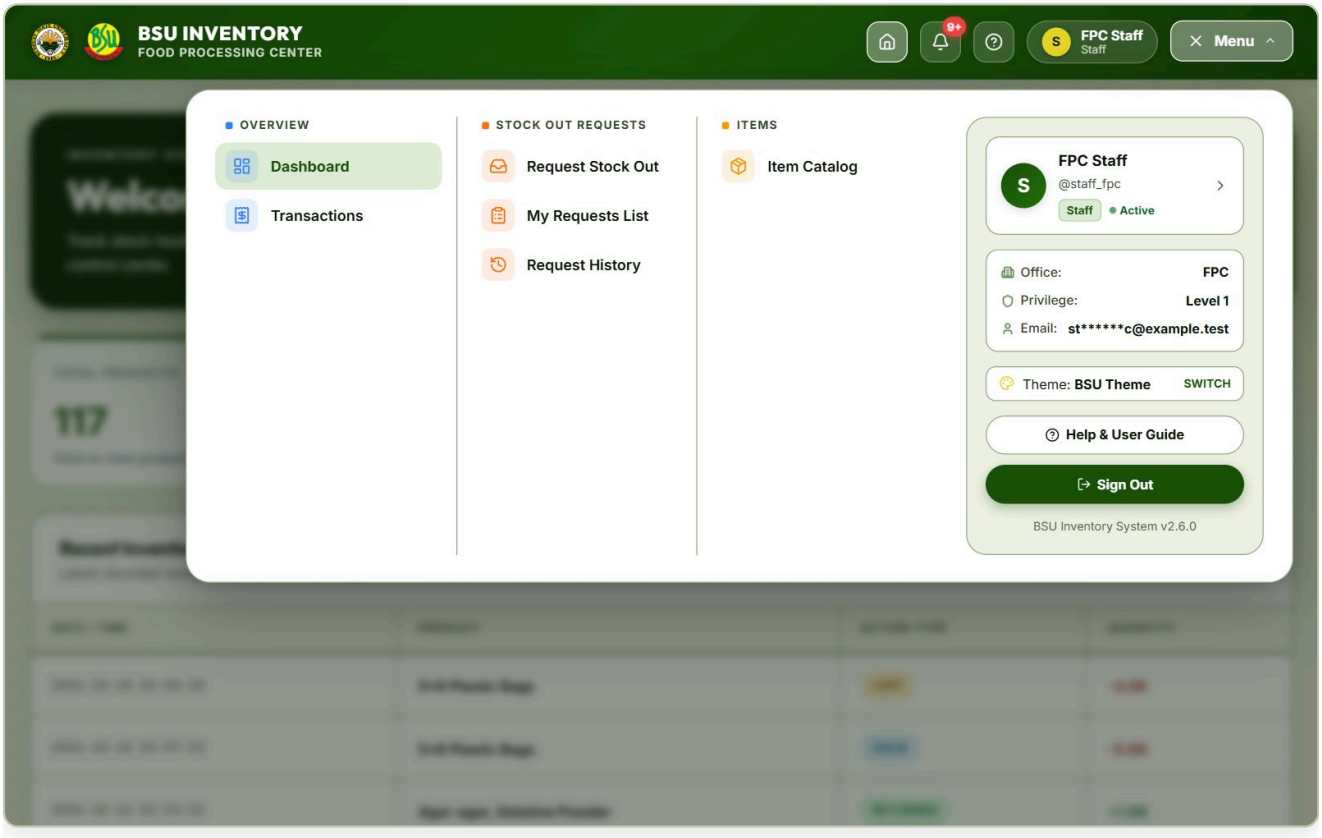

Figure 2. *The menu (here for staff), with your account card on the right: office, theme, Help & User Guide and Sign Out.*

What the menu shows for each role

STAFF

Overview: Dashboard, Transactions
Stock Out Requests: Request Stock Out, My Requests List, Request History
Items: Item Catalog

CUSTODIAN & MANAGER

Stock Out Requests: Pending Requests, Request History
Inventory & Stock: Stockcard Ledger, Physical Count, Borrowed Items
Reports: Summary Report
Products & Catalog: Product List, Finished Products, Batch Barcodes

MANAGER ONLY

Management: Office Settings, Audit Log

TECHNICAL STAFF

Overview: Dashboard
User Management: User Management (with the number of sign-ups waiting)

Closing a window without saving

Every window where you enter or change something can be closed with **Cancel**, the **X** in its corner, or a click outside it. If you already typed, picked or scanned something, the system first asks **"Discard your changes?"**:

- **Keep editing** takes you back to the window with everything still filled in.
- **Discard changes** closes it. Nothing is saved.

This applies to recording stock in and out, editing a stockcard entry, adding or editing a product, the Excel imports (once a file is chosen), the card editor in the import preview, the Office Settings and user office lists, and the archive and reject windows (once a reason is typed). If you didn't change anything, the window simply closes.

Your profile and password

Click your name in the top bar → My Profile

- **Profile Details:** edit your full name and username, then click **Save Profile Changes**.
- **Password & Security:** enter your current password and the new one twice. You stay signed in here; your other devices are signed out.
- **Email:** to use a different address, change it on My Profile. The new address is confirmed with a code sent to it.

> Your email address is always shown partly hidden (for example `ju*****z@bsu.edu.ph`) so it can't be read off your screen.

Signing out and staying signed in

You are signed out automatically:

- after 15 minutes without activity,
- 24 hours after signing in, in any case,
- on every other device when your password is changed,
- at once if your account is deactivated.

Shared computers

Always sign out when you finish: open **Menu** and use **Sign Out** on your account card. Closing the tab or the browser window does not sign you out at once; that only happens after 15 minutes without activity.

CHAPTER 3

Staff Guide

Staff

You request the items your work needs. Items go into your list, you submit the list, and your custodian or manager accepts or rejects each item.

Dashboard and transactions

The **Dashboard** shows the state of your office's stock in summary cards: **Total Products, Low Stock Alerts, Out of Stock, Expiring Soon** and **Items Out (Borrowed)**. Click a card to list those items.

Transactions (Menu → Overview) lists every receipt, issue, return, loan and adjustment. Filter by type or date to find one.

Requesting items

Menu → Request Stock Out

1. Find the product: type its name in the search box, or scan the barcode on its batch label with a barcode scanner. On a phone or tablet, tap the **camera button** in the search box and point the camera at the label.
2. Enter the quantity you need and add it to your list.
3. You are taken to your list. Click **+ Add More Items** to add the next item.

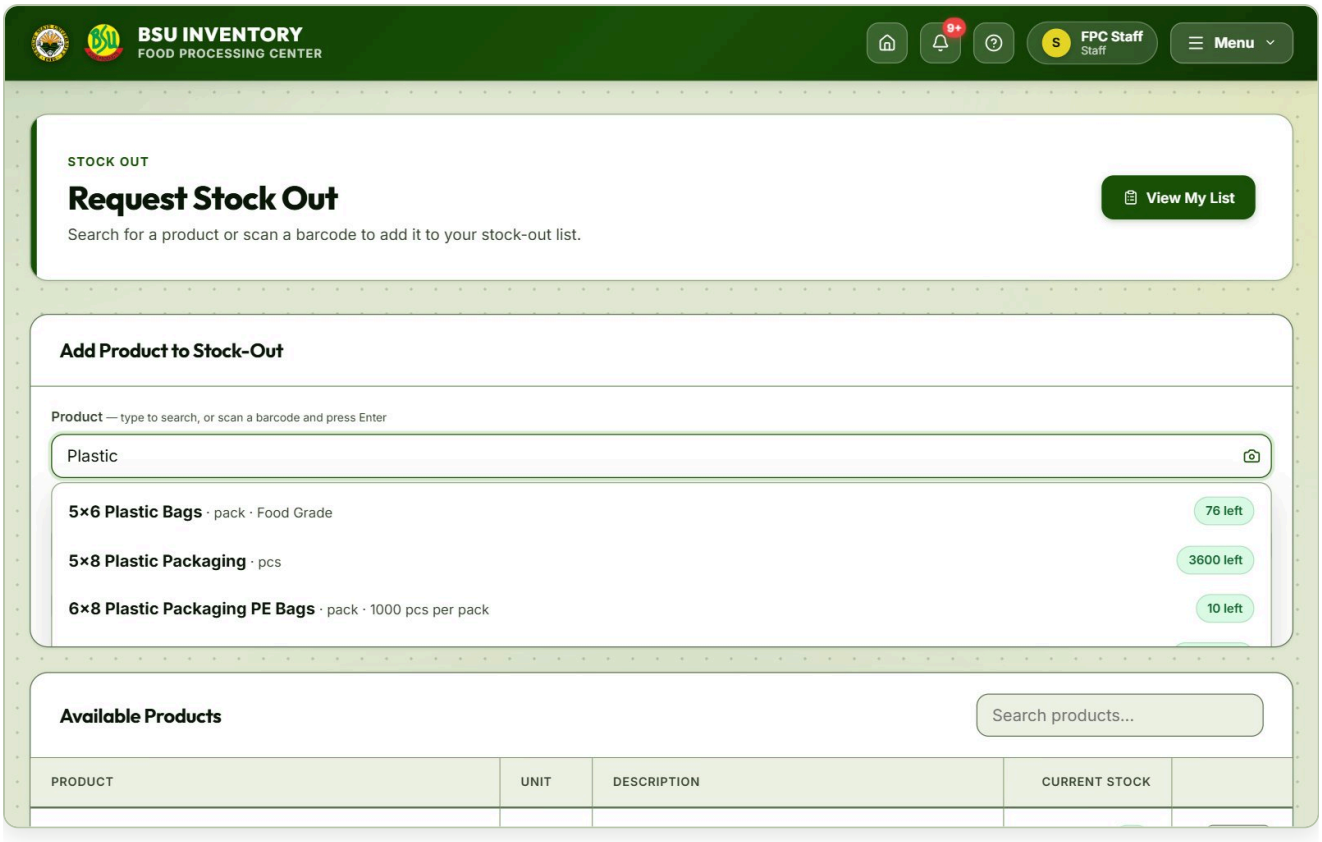

Figure 3. *Request Stock Out: type part of a name to find a product. Each one shows how much is left.*

> **Nothing is sent yet**
> Items wait in your list until you submit it. A product with no stock left is marked **Out of stock** as soon as you choose it, and can't be added.

Reviewing and submitting your list

Menu → My Requests List

1. Check each item. Change a quantity or remove an item if needed.
2. Click **+ Add More Items** if something is missing.
3. Click **Submit**. Your custodian or manager is notified.

Request history

Menu → Request History

Shows every request you made. Each item shows whether it was **accepted** (and how many you were given) or **rejected**, with the reason. You also get a notification under the bell's **Requests** tab when a decision is made.

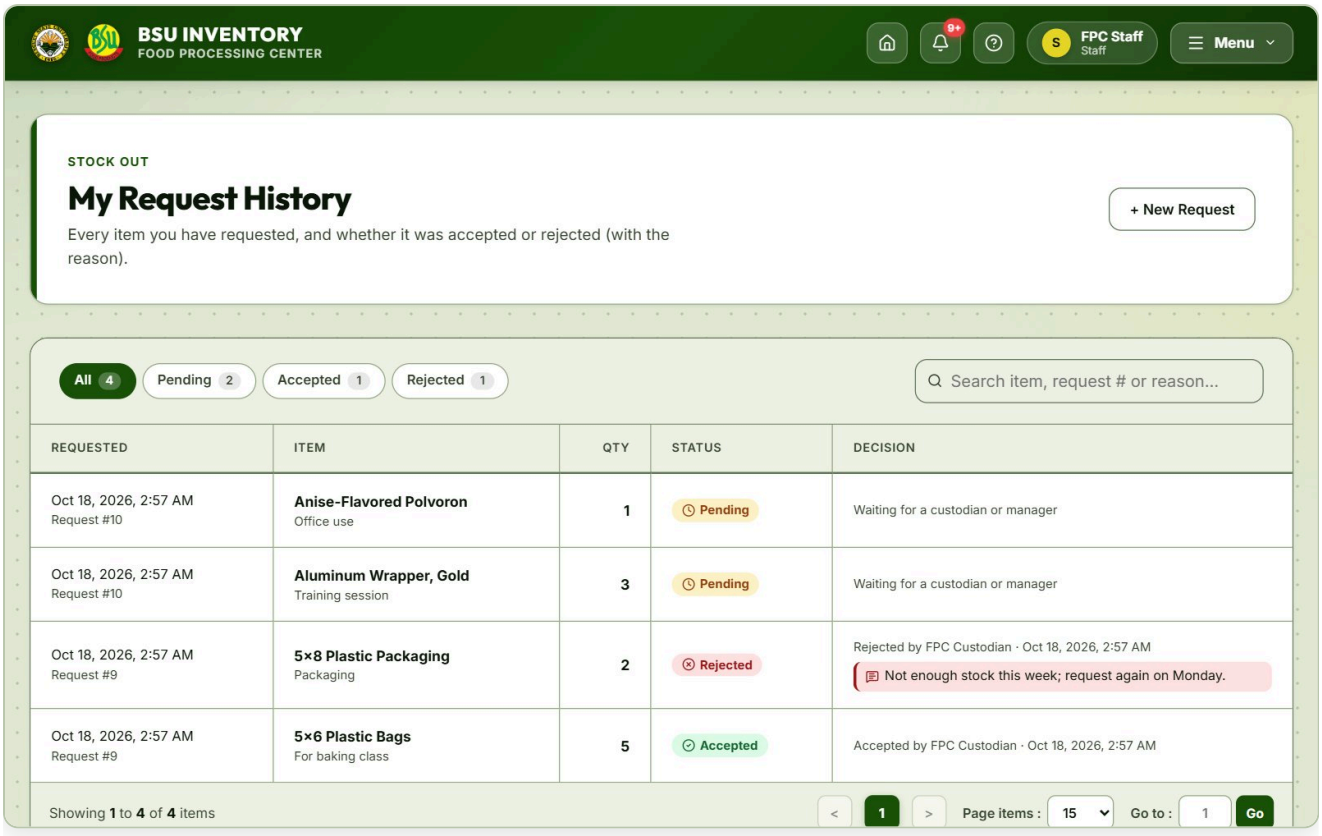

Figure 4. *Request History: pending, accepted and rejected items. A rejection shows the reason.*

> **A request was rejected?**
> Read the reason in Request History. You can submit a new request with a smaller quantity or a different item, or talk to your custodian.

Item catalog

Menu → Item Catalog

Search or filter to find an item and see how much is on hand before you request it.

CHAPTER 4

Custodian Guide

Custodian Manager

You keep the stock records of your office. Managers can do everything in this chapter too.

Dashboard

The Dashboard cards (**Total Products, Low Stock Alerts, Out of Stock, Expiring Soon, Items Out (Borrowed)**) show what needs attention. Click a card to see the items behind it. From the **Items Out (Borrowed)** details you can also record a return.

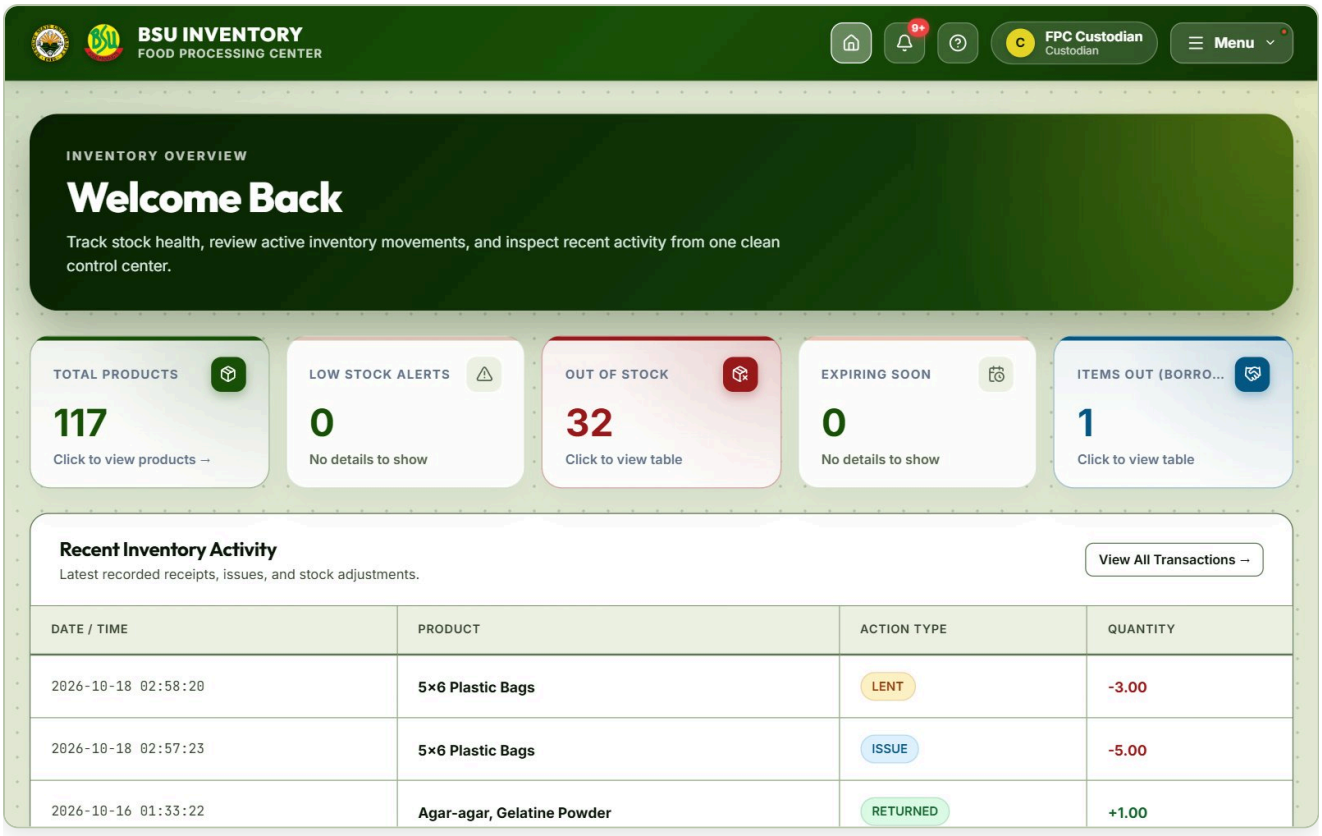

Figure 5. *The Dashboard: summary cards and the latest stock movements.*

Accepting or rejecting staff requests

Menu → Pending Requests

The number next to **Pending Requests** shows how many requests are waiting. Each request lists the items with the **Qty Requested** and the **Stock Available**.

1. Open a request. If you can only give part of an item, use **Edit** to change its quantity.
2. Click **Accept** or **Reject** for each item, or **Accept All** for the whole request. Accept All gives every item there is enough stock for and leaves the others.
3. A rejection needs a reason. The staff member sees it in their Request History. If you close the window after typing a reason, the system asks before throwing it away.

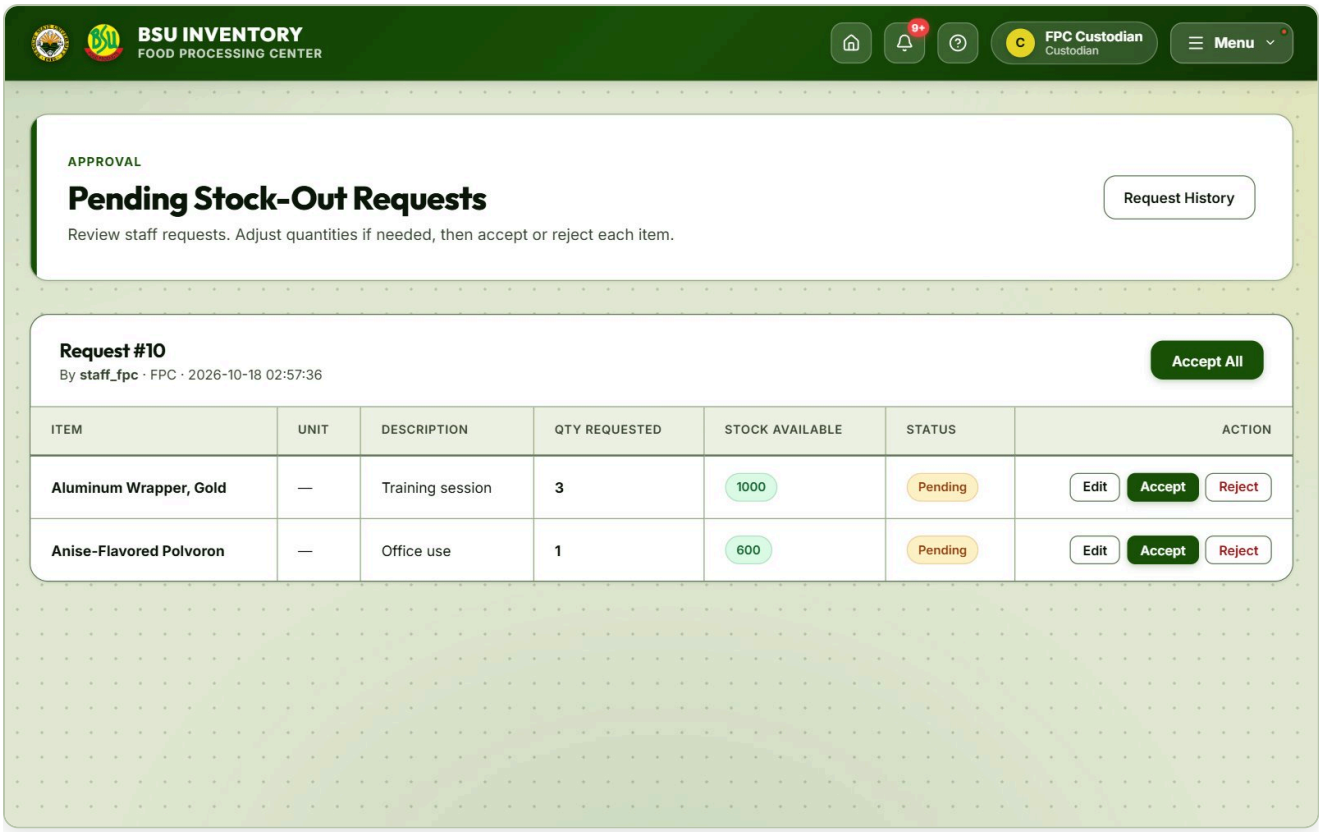

Figure 6. *Pending Requests: change a quantity with Edit, then Accept or Reject each item, or Accept All.*

Accepted items are issued from stock automatically, oldest batch first. You don't need to record them again on the stock card.

The Stockcard Ledger

Menu → Stockcard Ledger

The stock card is the full history of one product: every receipt, issue, loan, return and adjustment, with the running balance after each one. Choose the product at the top, or scan its barcode in the search box.

A product can have **sub-products (price variants)**: the same item bought at different unit costs. Each delivery at a new cost becomes its own variant, so the value of your stock stays correct. When you issue stock, you choose which variant it comes from.

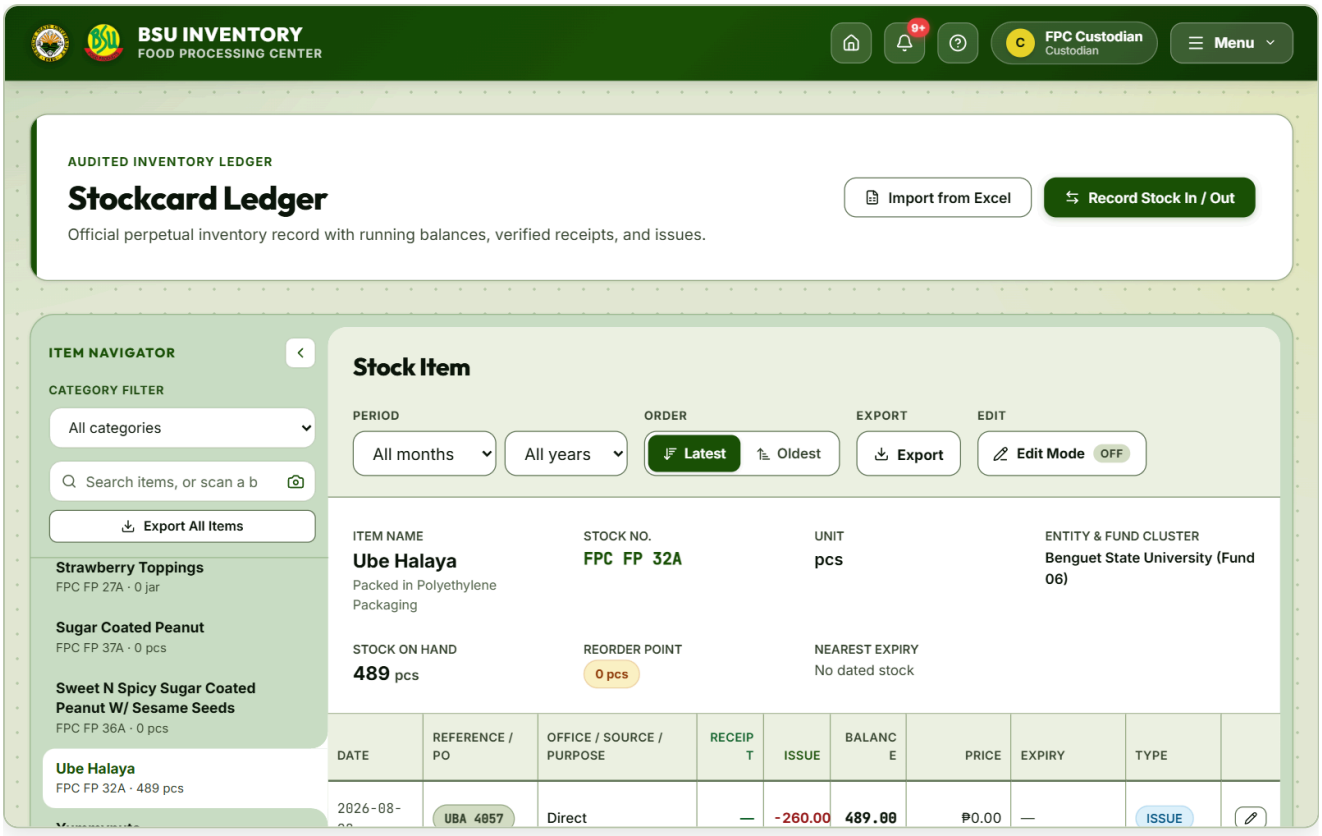

Figure 7. *The Stockcard Ledger: the item navigator on the left, the product details and its ledger on the right.*

Recording stock in and out

Stockcard Ledger → Record Stock In / Out

1. Choose the product and click **Record Stock In / Out**.
2. Choose the **Stock Movement / Transaction** (see the table below).
3. Fill in the date, quantity and the other details the movement asks for. The date can be in the past (for late paperwork), but not in the future.
4. For movements that take stock out, check the **batch plan**: it shows which batches the quantity will come from, oldest first.
5. Click **Record Transaction** and confirm. To close the window without recording anything, click **Cancel** or the **X**; if you already entered something, the system asks **"Discard your changes?"** first.

> **Lent and temporary stock**
>
> Under **Stock on Hand**, the ledger shows how much is lent out (click it to open **Borrowed Items**) and any temporary stock. Neither is written on the stock card's rows.

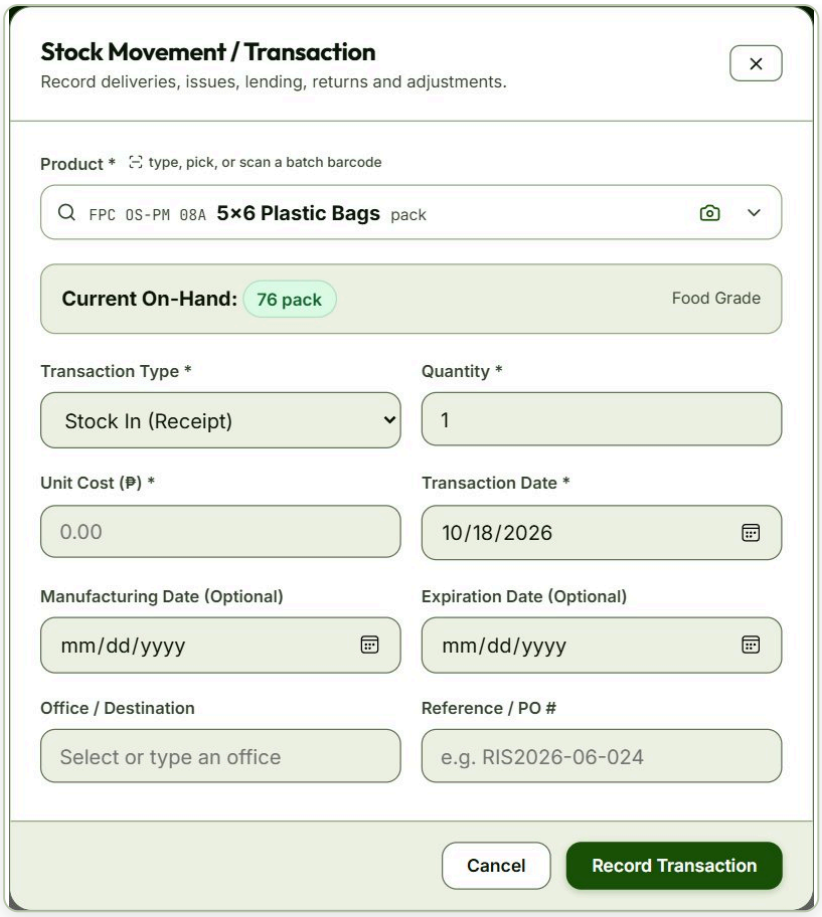

Figure 8. *The Record Stock In / Out window, here for a Stock In (Receipt).*

Movement	Use it for	You also enter
Stock In (Receipt)	Deliveries and purchases. Creates a new batch with its own barcode.	Unit cost; expiration and manufacturing dates (optional)
Stock Out (Issue)	Items released for use.	Sub-product; office / destination
Adjust Out (Spoiled, Damaged, Correction…)	Spoiled, damaged or expired stock, or a correction.	A reason
Adjust In (Wrong Count…)	Stock that is there but missing from the records.	A reason
Lend to Another Office (Borrow)	Items lent to another office or unit.	Borrower's name, borrowing office, Return By date (optional)
Return of Borrowed Stock	Lent items that came back.	The borrow being returned

Expiry dates matter
Enter the expiration date when you receive perishable stock. The system warns you before batches expire (see Chapter 7).

Temporary stock: tick it on a Stock In for stock that should be used up first. Stock-outs take it before the other batches, and it never shows on the stock card or the summary report.

Correcting entries

One entry

Use the edit button (pencil) on the ledger row to correct it or delete it. The edit form can also switch an entry between Receipt and Issue. Closing it with changes you haven't saved asks **"Discard your changes?"** first.

Several entries at once: Edit Mode

1. Open the product on the Stockcard Ledger and turn on **Edit Mode**.
2. The date, reference, office, quantity, price and expiry cells become editable. Change what is wrong. The trash button marks a row for deletion; the undo button puts it back.
3. Click **Save changes** in the bar at the bottom of the screen, or press `Ctrl` + `S`.

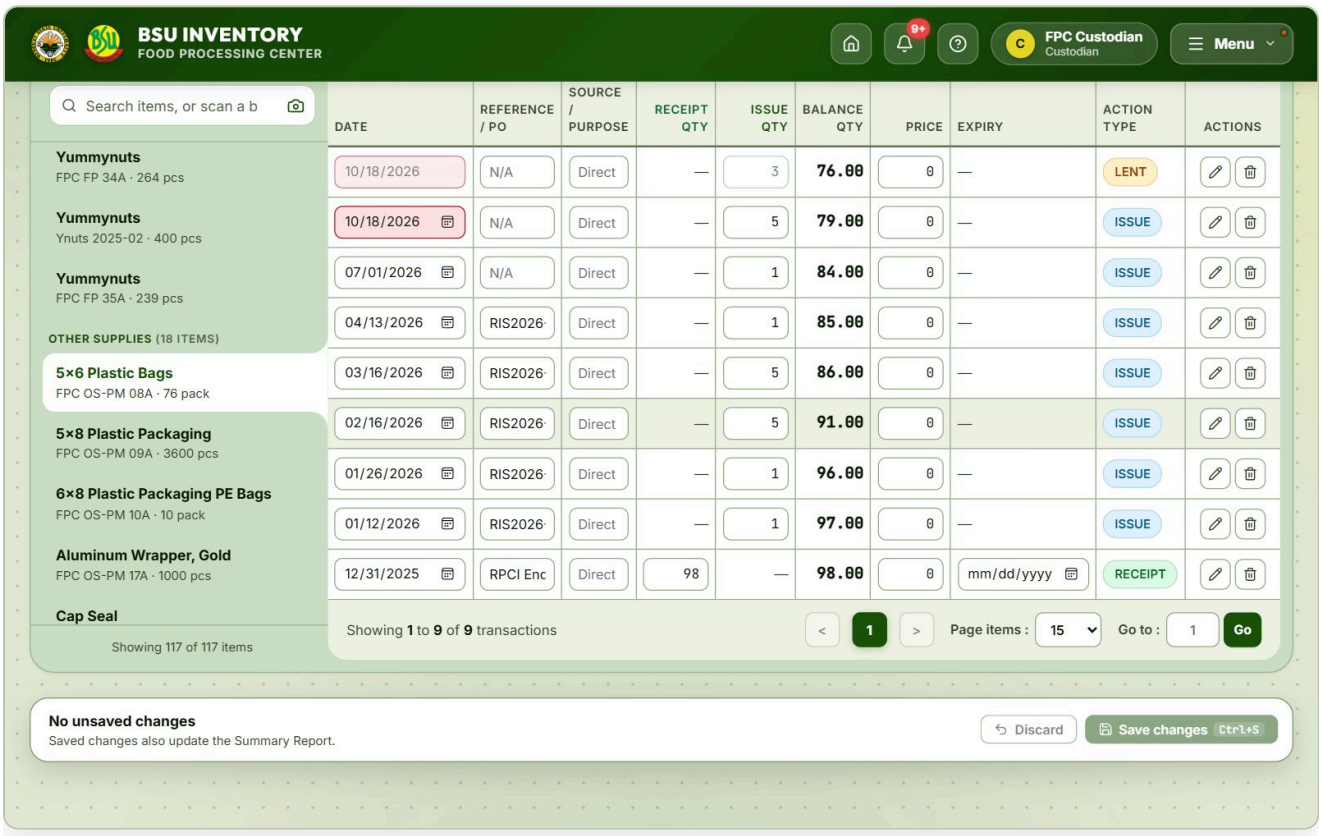

Figure 9. *Edit Mode: the cells become editable, and the bar at the bottom saves every change together.*

> **All or nothing**
>
> Everything is saved together. If one change is not possible (for example, stock would go below zero, or a date is in the future), **nothing** is saved and the bar tells you why. Fix that change and save again.

Every correction and deletion is kept in the audit log with the values before and after the change.

Lending and returns

Menu → Borrowed Items

1. **To lend:** Stockcard Ledger → Record Stock In / Out → **Lend to Another Office (Borrow)**. Enter who borrowed it, the borrowing office (or *Other office…* and type its name) and, if agreed, the Return By date.
2. **To follow up:** Borrowed Items shows each loan with the quantity **Lent**, **Returned** and **Still Out**, and its status. Overdue loans are marked.
3. **When items come back:** click **Record Return** on the loan (on Borrowed Items, or in the Dashboard's Items Out details), enter the quantity returned and confirm. The items go back into stock.

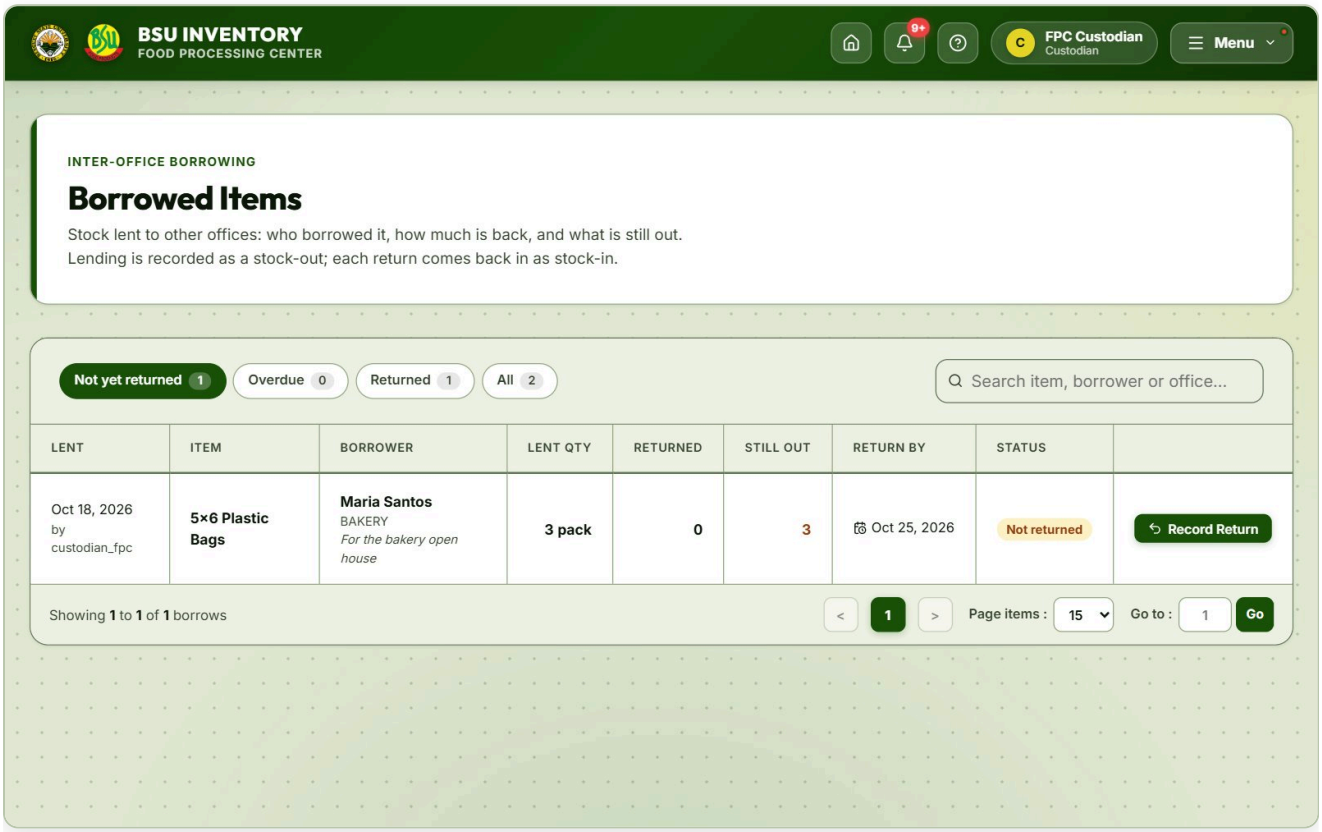

Figure 10. *Borrowed Items: what is still out, what came back, and Record Return.*

Physical count

Menu → Physical Count

1. Count what is actually on the shelf.
2. Open Physical Count. Each **Counted Qty** starts at the **System Qty**. Change only the products whose shelf count is different. You can also scan batch labels.
3. Check the **Difference** column: shortages and overages are worked out for you.
4. Reconcile. The system records an Adjust Out for each shortage (expired batches first) and an Adjust In for each overage, with the reason **Physical Count**.

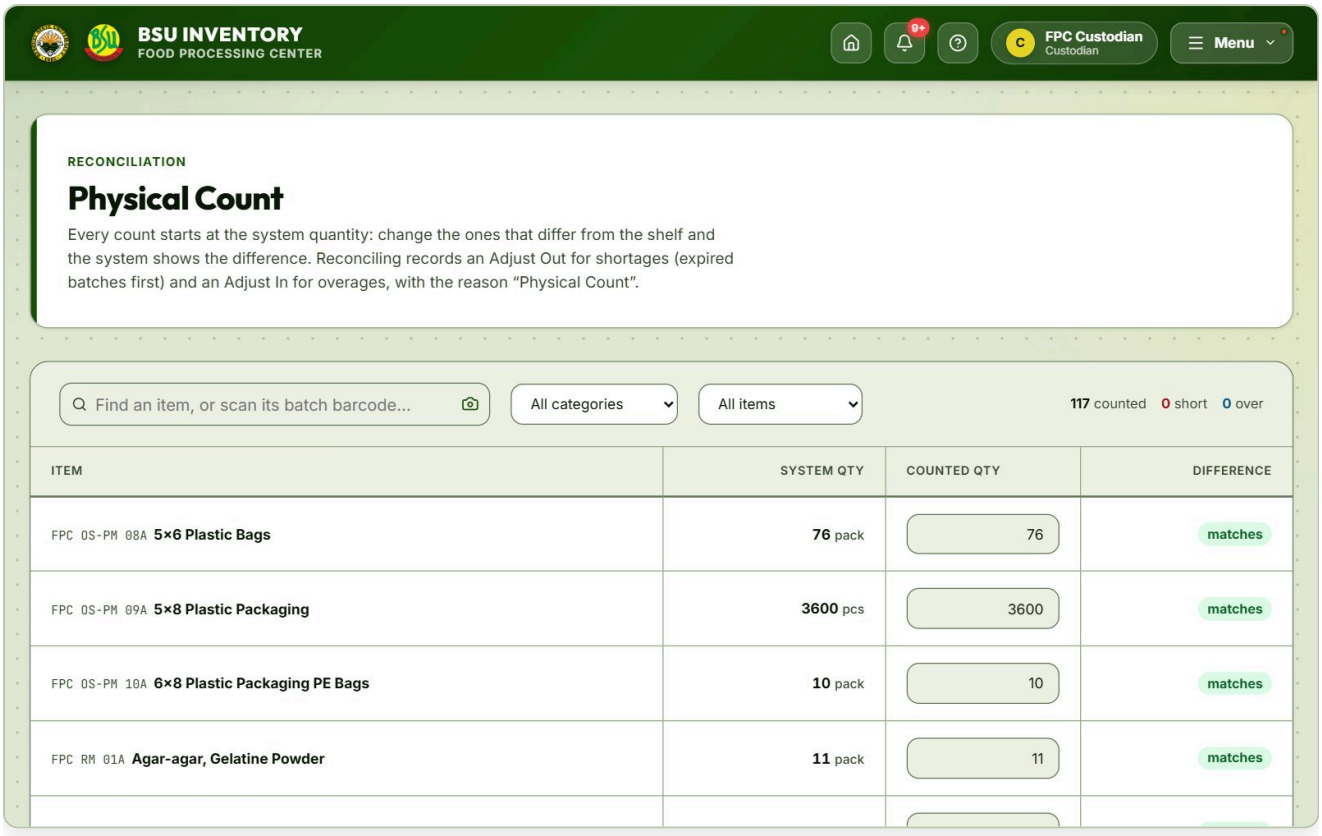

Figure 11. *Physical Count: change only the counted quantities that differ from the shelf.*

Products

Menu → Product List

1. Click **+ Add New Product**. Enter the **Stock Code** (for example `FPC RM 02A`; it must be unique in your office), the name, unit, product type, reorder point and expiry warning thresholds.
2. To change a product, use its edit button. Its stock code only changes if you change it yourself.
3. Changed your mind? Click **Cancel**, the **X** or outside the window. If you changed anything, the system asks **"Discard your changes?"**: choose **Keep editing** to go back to the form, or **Discard changes** to close it without saving (see Closing a window without saving).
4. A product that has history can't be deleted. **Archive** it instead (with an optional reason). The **Archived** tab lists archived products and lets you restore them.

> **Borrowed and temporary stock**
>
> The Product List shows how much of each product is **Borrowed** (click it to open Borrowed Items) and how much is **Temporary** stock. Physical Count also shows the temporary part of the System Qty: it is counted, but never shows on the stock card.

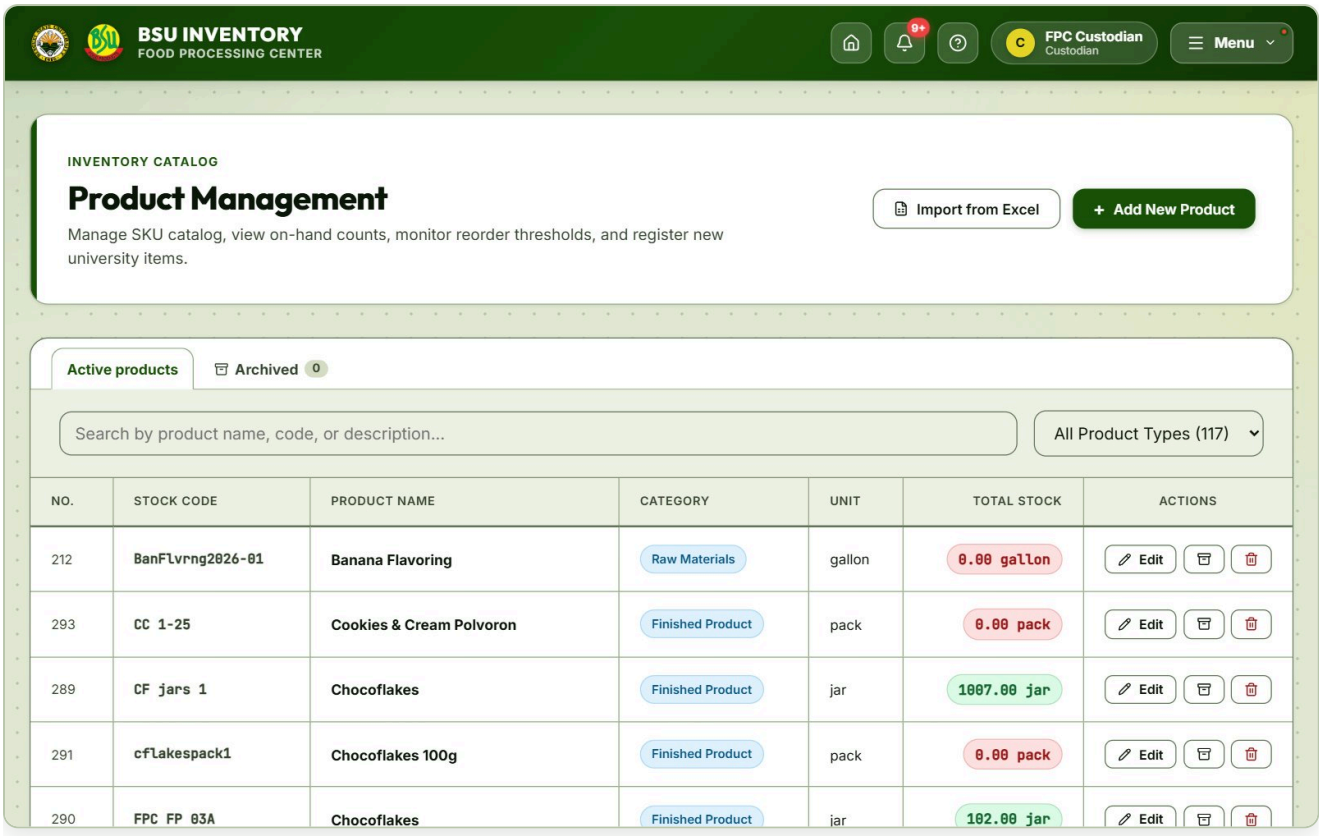

Figure 12. *Product List, with each product's stock code and stock on hand.*

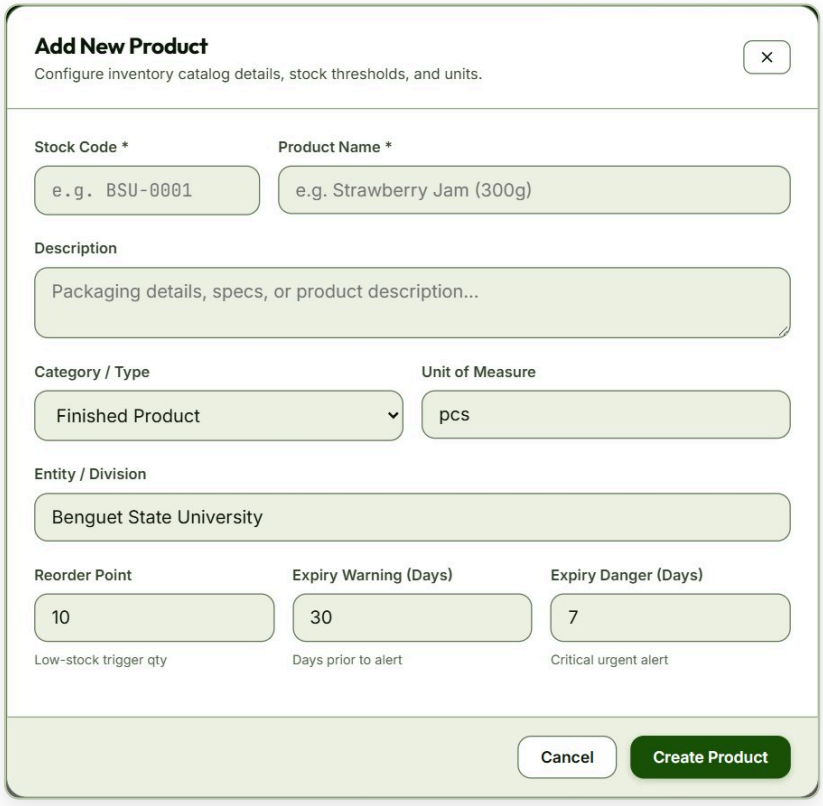

Figure 13. *Adding a product: the Stock Code and Product Name are required.*

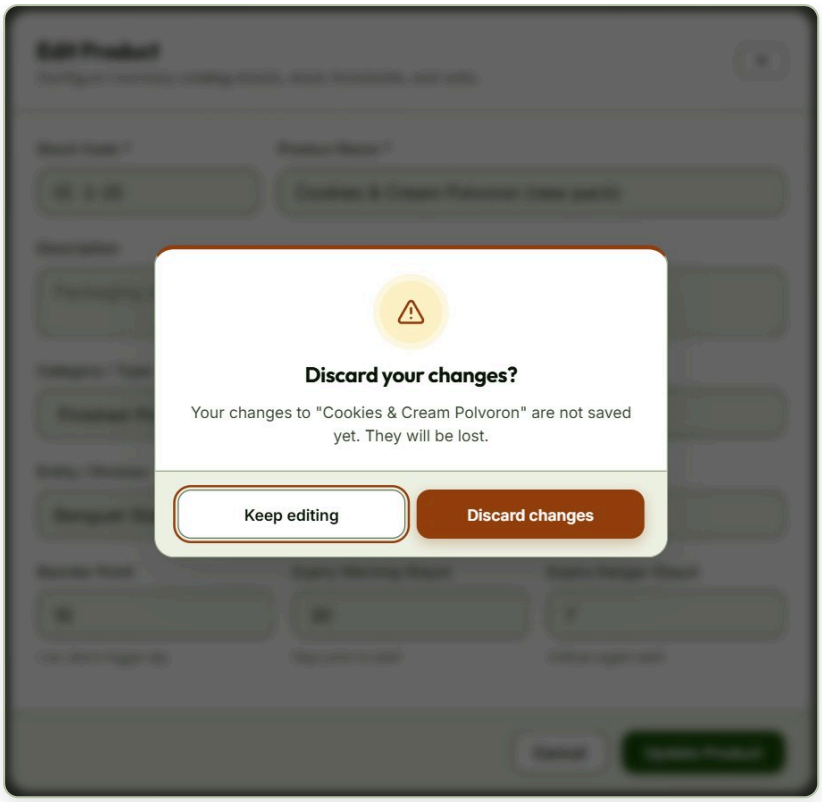

Figure 14. *Cancelling after changing a product asks before anything is thrown away.*

> **Two numbers worth setting**
> The **reorder point** decides when a product shows as low stock. The **expiry thresholds** decide how many days before expiry the warnings start.

Barcodes and labels

- **Batch barcodes** (Menu → Batch Barcodes): every batch gets its own barcode when stock is received. Download it and print a label for the batch. Search by product name, stock code, batch number or barcode.
- **Finished products** (Menu → Finished Products): generate a barcode for a finished product, or download one made before.
- **Scanning:** the search boxes of Stockcard Ledger, Physical Count, Stock Movement and Request Stock Out accept a USB or wireless barcode scanner, or the camera button in the box.

> The camera button works on phones, tablets and computers with a camera when the system is opened with its `https://` address. The first time, allow the browser to use the camera.

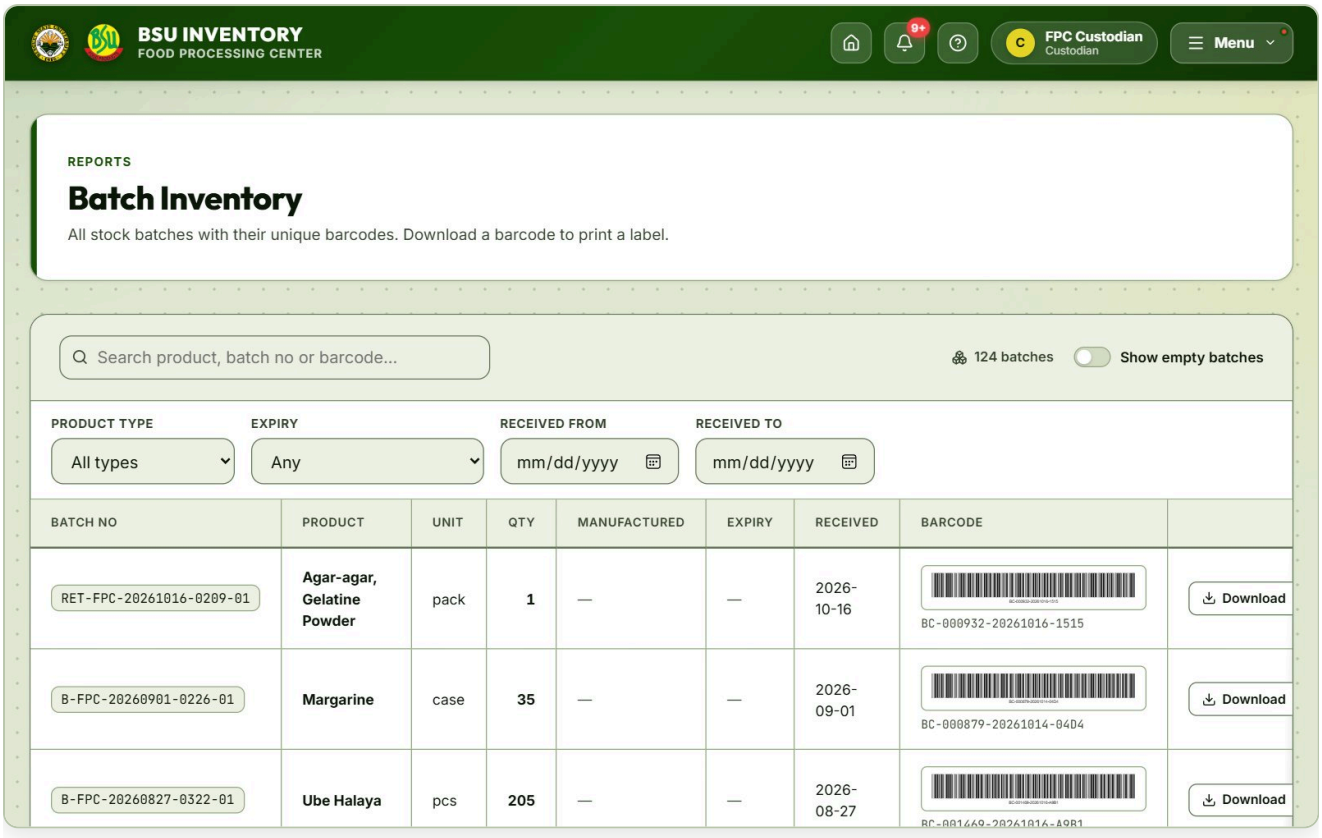

Figure 15. *Batch Barcodes: every batch with its barcode, ready to download and print.*

Importing stock cards from Excel

Stockcard Ledger → Import from Excel

Use this to bring existing Appendix 58 stock cards (one card per sheet) into the system.

1. Click **Import from Excel** and choose the `.xlsx` file. The system reads every card and shows a preview. Nothing is saved yet.
2. **Problems to fix** (red) would put wrong numbers into your stock: negative stock, a balance that doesn't add up, a card that can't be read. Click a card to correct its rows right in the preview, or fix the Excel file and click **Cancel & Re-upload**.
3. **Guesses to confirm** (orange) are things the system already filled in by itself, grouped by kind: date guesses (a missing day or year), dates out of order, values in the wrong column, cards merged into one product, stock corrected to match the card, and units filled in. Open **Show all** to check them, then click **Accept** for each group, or **Accept all guesses**.
4. If some products still have problems, you can tick **Leave out the products with problems and import the rest**. Those products are dimmed and marked *Left out*.
5. Choose how to import (see the box below) and click **Import**.

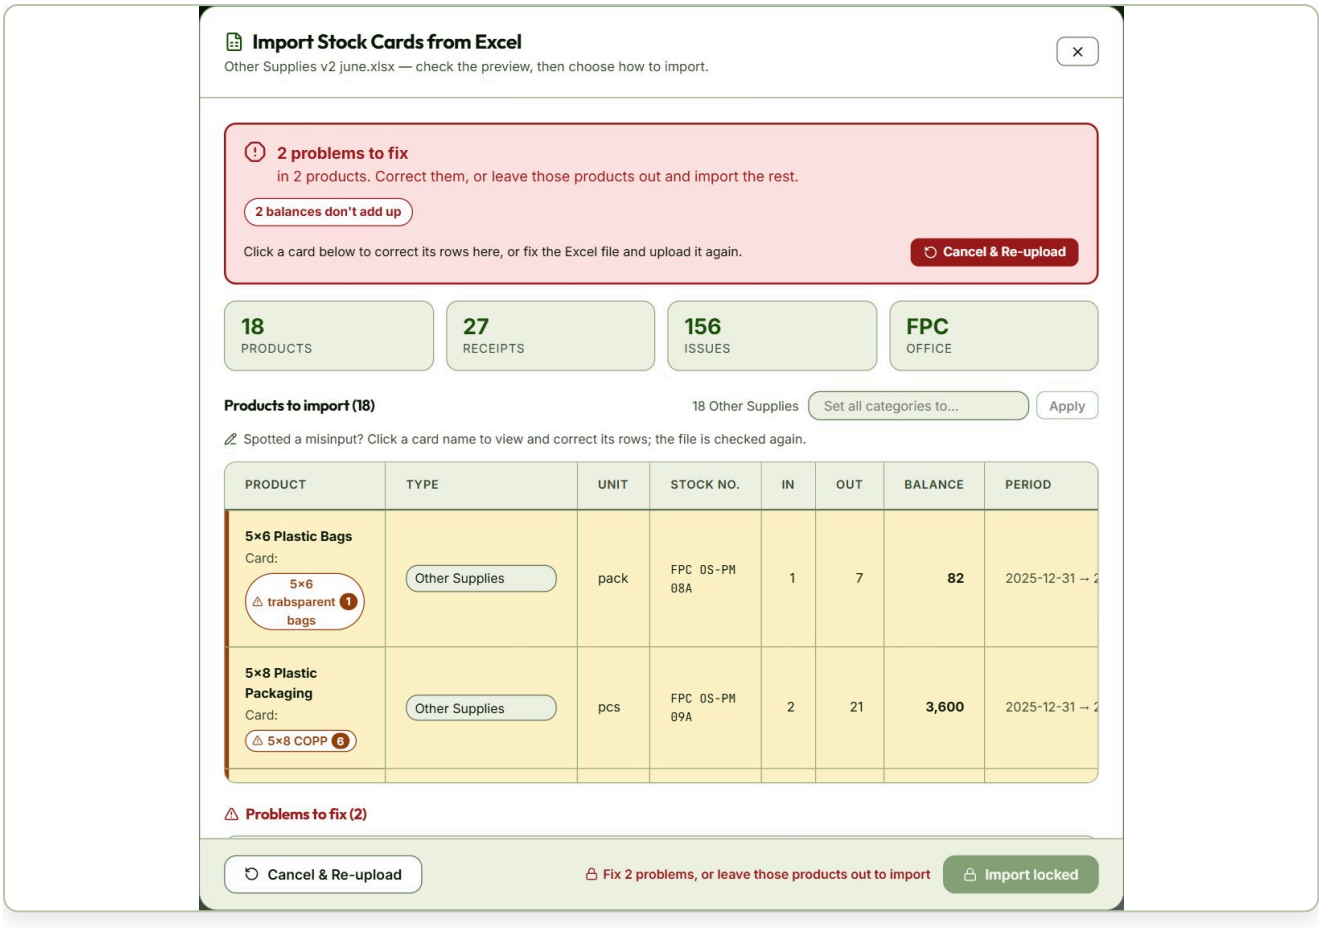

Figure 16. *The preview of a stock card workbook: 2 problems to fix in 2 products, and the products to import.*

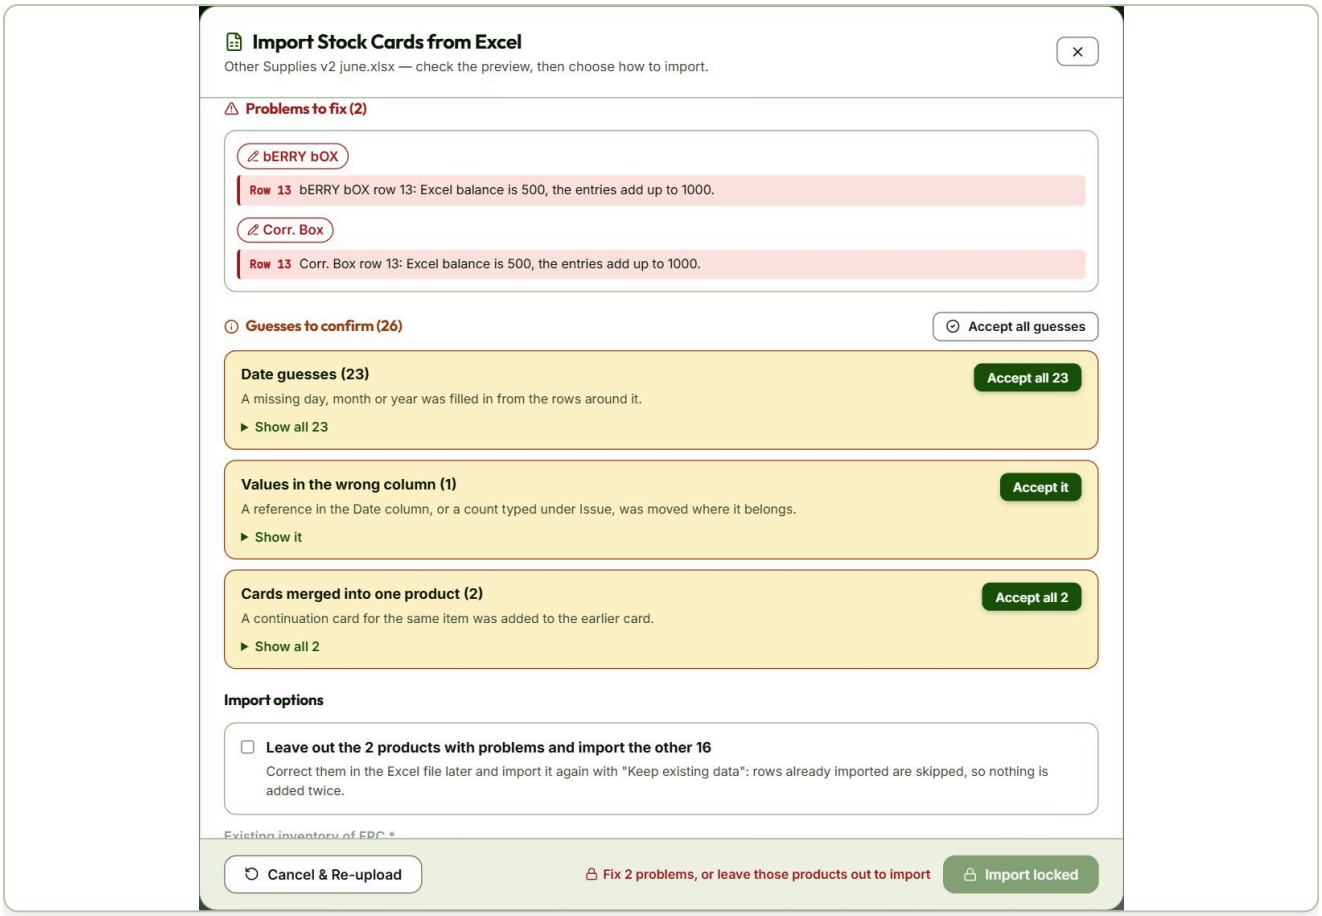

Figure 17. *Problems to fix (red) and Guesses to confirm (orange). Each group of guesses is accepted with one click.*

A "Recheck these dates" window opens

The stock card and the Summary Report add up the entries by date. A mistyped date can put an issue before the stock it takes from (for example, a receipt typed as July instead of January), and the stock and the Summary Report's beginning qty would then be negative. The window lists each card with the rows and dates to check. Click a card to correct the date, or fix it in the Excel file and click **Cancel & Re-upload**. Until the date is corrected, the product stays a problem to fix (or can be left out).

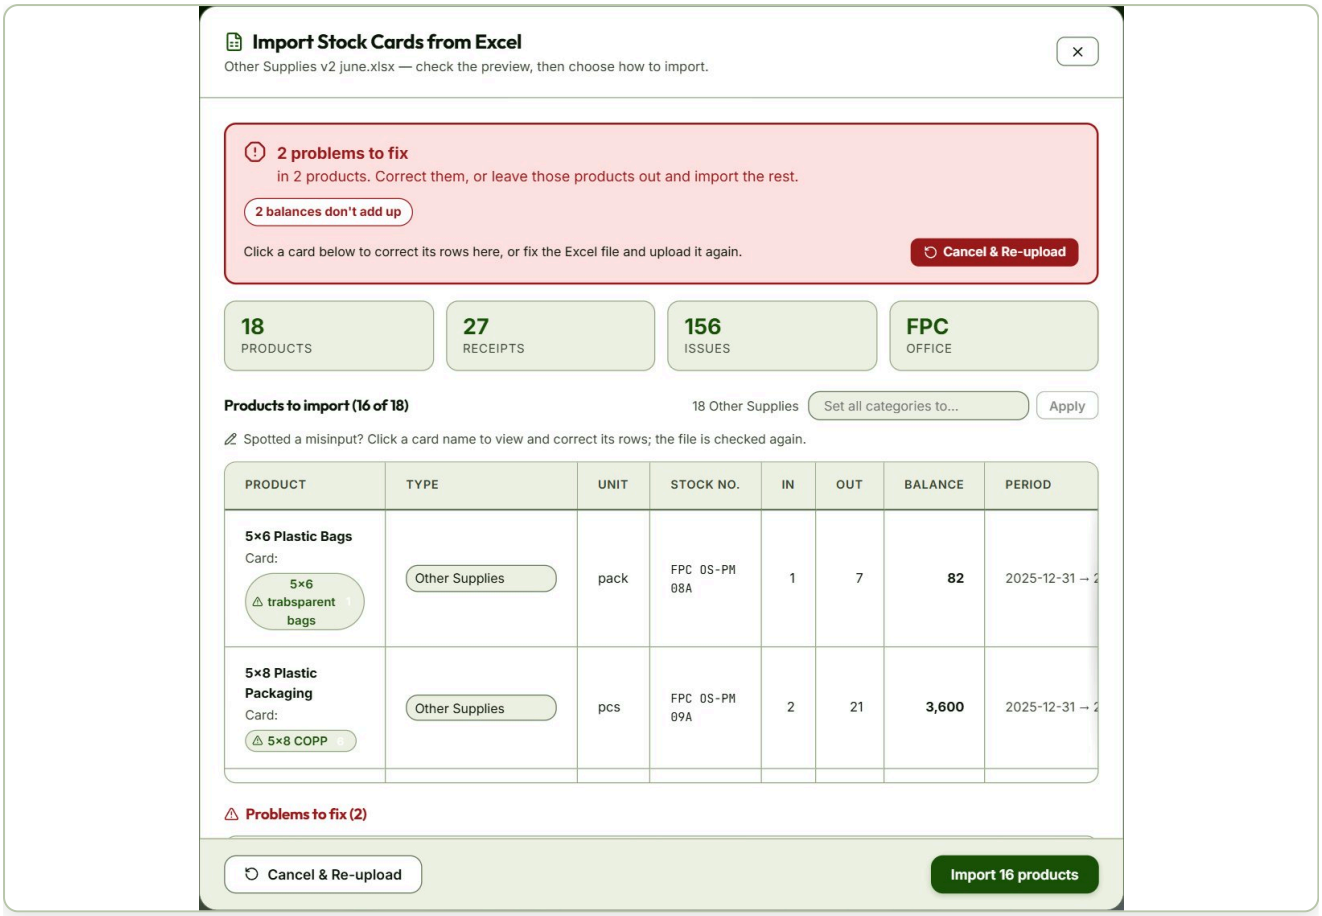

Figure 18. *Guesses accepted and the 2 products with problems left out: the other 16 can be imported.*

Several cards for the same item

Cards for the same item in the same office become one product. A card that continues an earlier one (its first line carries forward the earlier card's balance, for example the earlier card's stock number or *Balance forwarded*) is read as a continuation, even if a date looks out of place. A card for a separate lot that overlaps in time (for example a donated batch) is listed under *Cards merged into one product*, and its opening stock is added.

Closing the import window

Nothing is imported until you click **Import**. Once a file is chosen, Cancel, the X or a click outside asks before the file and the preview (with any corrections made in it) are thrown away. The card editor does the same for corrections not applied yet.

Products left out can be imported later

Correct them in the Excel file and import it again with *Keep existing data*. Rows already imported are skipped, so nothing is added twice.

Add temporary stock

Tick it under the import options and enter a quantity per product. It is added as of today, used up before the rest of the stock, and kept off the stock card and the summary report.

Two ways to import

Keep existing data and add the Excel entries: products with the same name and unit are reused, and rows imported before are skipped, so importing the same file twice adds nothing.

Delete existing inventory first, then import: removes your office's products, batches, transactions and stock-out requests before importing. A backup is made automatically first. A manager must enter their password to approve it.

Monthly Summary Report

Menu → Summary Report

Shows, for each product and month, the **beginning** balance, **purchases**, **used**, **spoiled** and **ending** balance, with quantities and costs. Choose the product type, month and year; the report updates as soon as you change a filter.

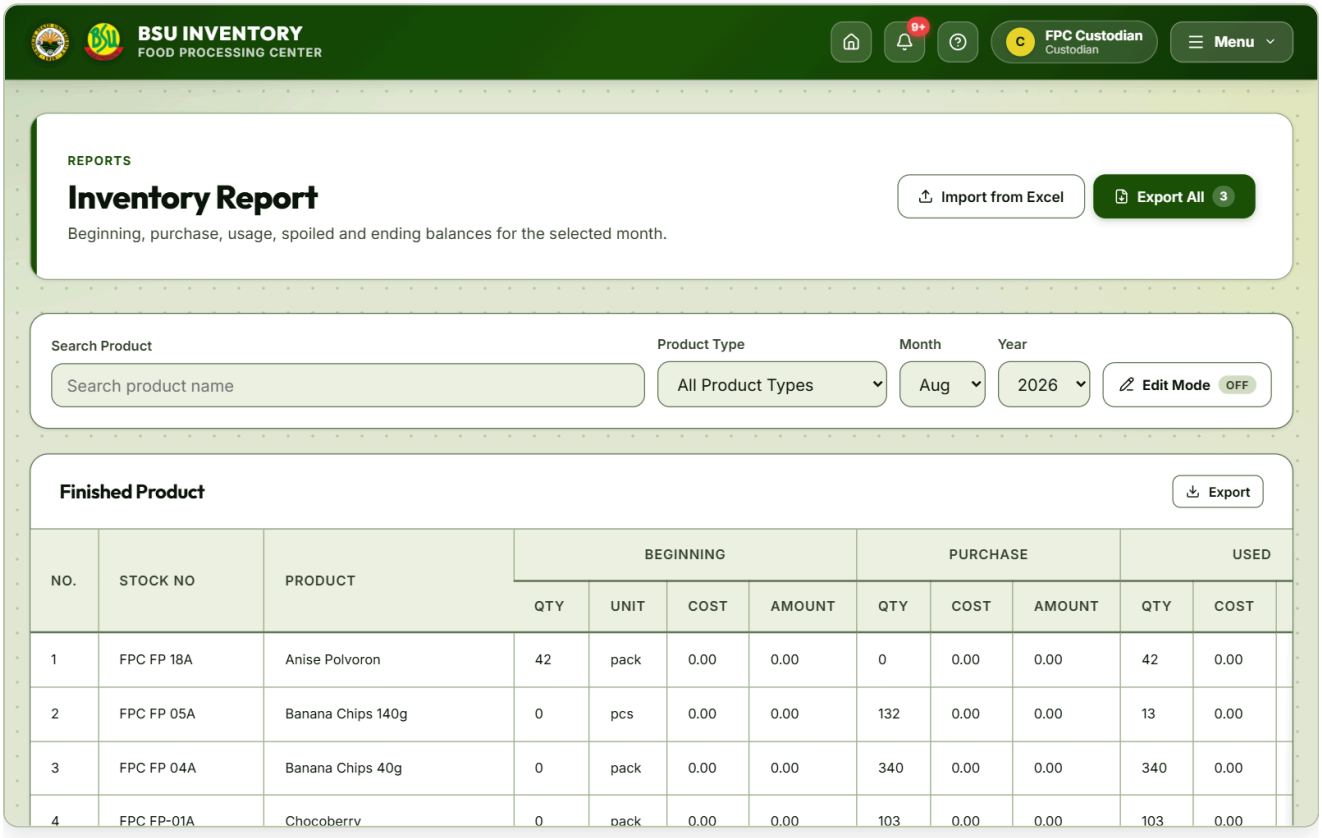

Figure 19. *The Summary Report for August 2026: Import from Excel and Export All at the top, and Export on each product type.*

Correcting figures: Edit Mode

1. Choose the month and turn on **Edit Mode**.
2. Change a Purchase, Used or Spoiled **quantity** or **cost**. A product with several entries in the month shows one line per entry.
3. Click **Save changes** (or `Ctrl`+`S`).

Each figure in the report is a stock card entry, so saving here updates the Stockcard Ledger too. The filters are locked while you have unsaved changes.

Importing a Summary Report from Excel

Summary Report → Import from Excel

Use this to bring in a monthly Summary Report kept in Excel: one sheet per product type, with the columns Beginning Inventory, Purchases, Used, Breakage and Ending Inventory.

1. Click **Import from Excel** and choose the `.xlsx` file in the dashed box.
2. If the file doesn't say which month it is for, choose the **Report month**. Most files say it in a line such as *Inventory for the month of SEPTEMBER 2026*.
3. Click **Preview**. Check the products, quantities and costs, and the month shown. Nothing is saved yet.
4. Choose how to import: *Keep existing data and add the Excel entries*, or *Delete existing inventory first, then import* (this needs a manager's password, and a backup is made automatically).
5. Click **Import**. The result shows how many products were created or reused, and how many receipts, issues and breakage entries were recorded.
6. To stop without importing, click **Cancel** or the **X**. Once a file is chosen, the system asks **"Discard your changes?"** first.

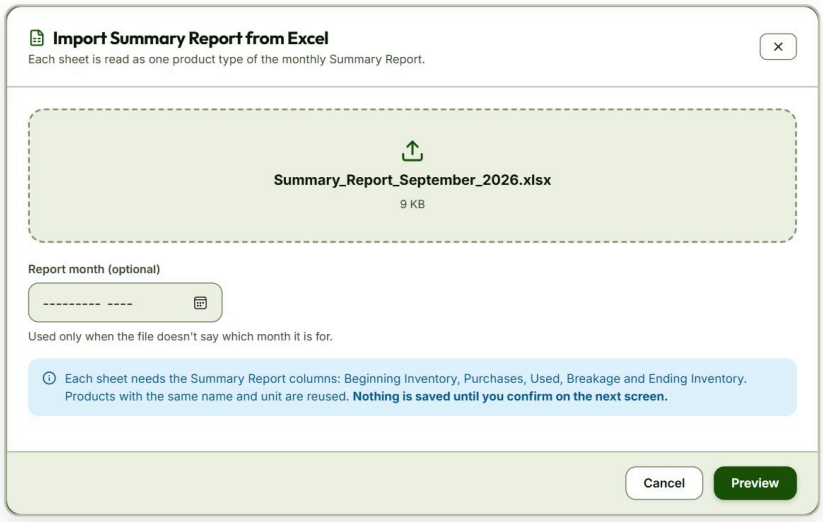

Figure 20. *Choosing the Summary Report file. The report month is only needed when the file doesn't name the month.*

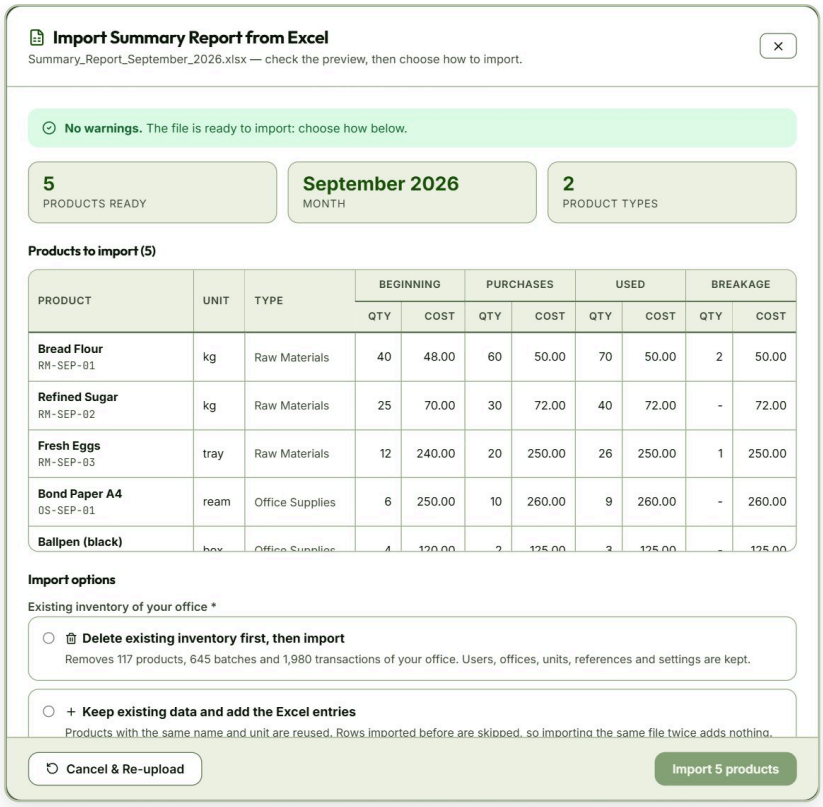

Figure 21. *The preview: each product with its beginning, purchases, used and breakage quantities and costs.*

The beginning inventory is recorded as the balance carried into the month; purchases, used and breakage are recorded within the month, taken from the oldest stock first. Importing the same file again with *Keep existing data* adds nothing.

> **The figures must add up**
> If a row uses more than there is in stock (beginning + purchases is less than used + breakage), the import stops and **nothing** is saved. The message names the product, sheet and row to correct.

Exporting reports

Reports are exported from the page where you read them: stock cards from the **Stockcard Ledger**, the monthly report from the **Summary Report**. Each opens a preview where you can check and edit the report before you download it.

Official stock card (Appendix 58)

Stockcard Ledger → Export

1. Set the **Period** (a month and year, a whole year, or all) and the **Order**.
2. One item: open it and click **Export** in the Stock Item bar. Several items: choose a **Category Filter** in the Item Navigator and click **Export** under the search box (with no category it reads **Export All Items** and exports every item).
3. The **Preview & Edit Stock Card** page opens with the card already built. Change the wording if needed and click **Save Changes**.
4. Choose the **Paper Size** and **Date Order**, then click **PDF Document** or **Word Document**.

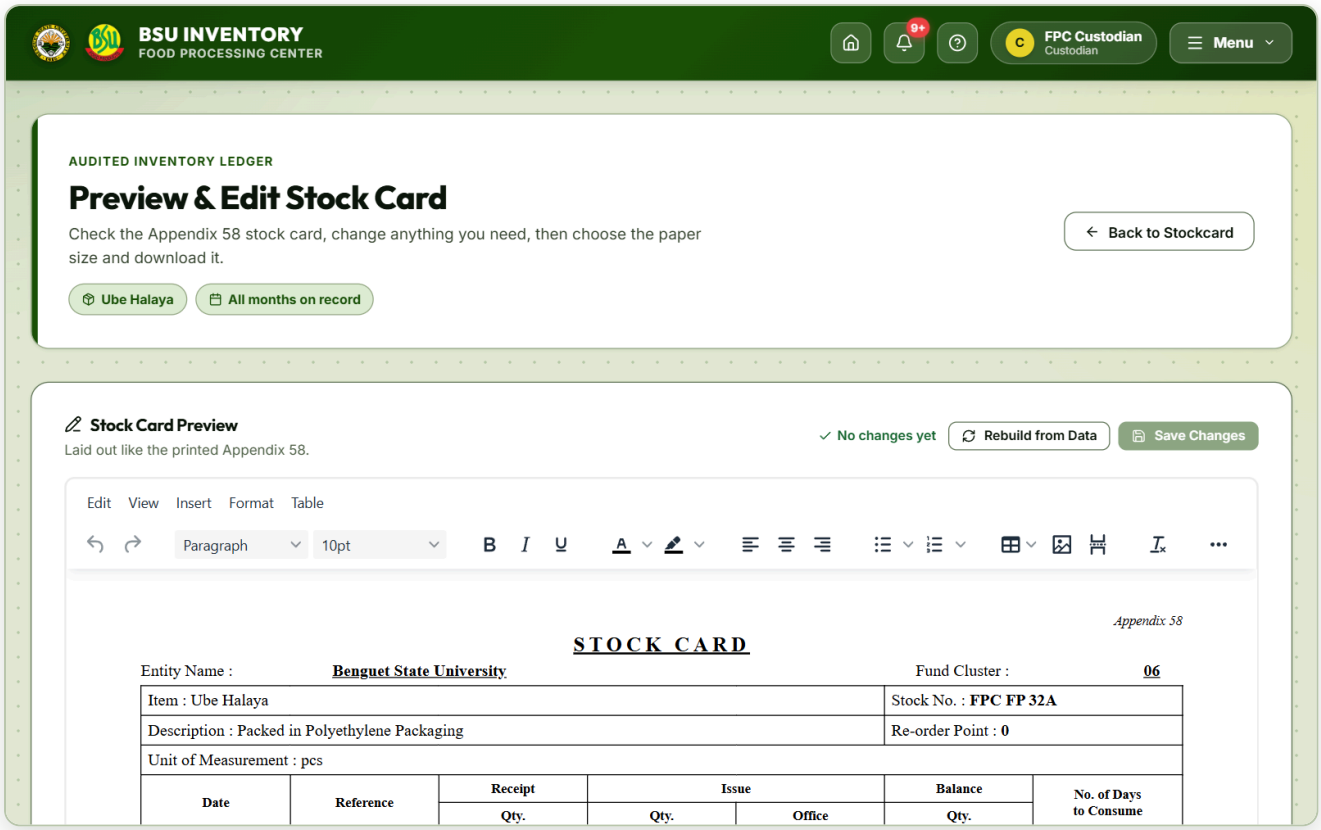

Figure 22. *Preview & Edit Stock Card: the Appendix 58 card in the editor; the paper size, date order and downloads are below it.*

> **A month needs a year**
>
> A month with *All years* can't be exported: pick a year too. Changing the Date Order builds the card again, and **Back to Stockcard** returns to the ledger with the same item, period, order and category.

Summary Report

Summary Report → Export or Export All

1. Choose the month and year. To narrow it down, choose a product type or search for a product.
2. One product type: click **Export** at the top right of its table. Every product type at once: click **Export All** at the top of the page. The number on the button is how many product types the file will have, one page each.
3. The **Preview & Edit Report** page opens. The tags under its title show the product type (*All Product Types* for Export All) and the month.
4. To download it as it is, scroll past the report, choose the paper size (**Long**, **Short** or **A4**) and click **PDF Print** or **MS Word**.

> **Export All takes what the page shows**
>
> With a product type chosen or a search typed, only those are exported. The button is greyed out when the month has no reports.

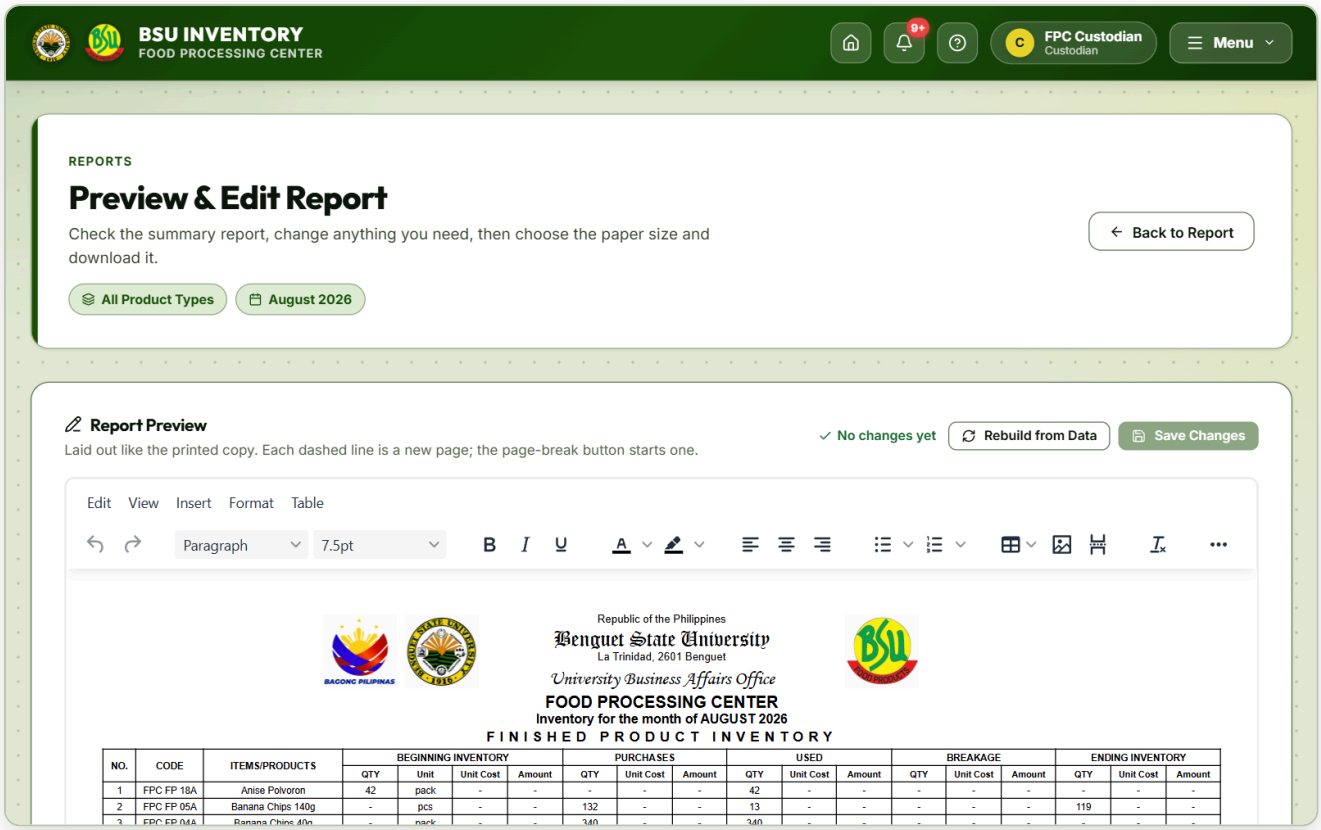

Figure 23. *Preview & Edit Report opened with Export All: every product type for August 2026 in one report, one page per type.*

Editing the report before downloading

1. The report opens in an editor, laid out exactly like the printed copy. Each dashed line is a new page; use the page-break button in the toolbar to start a page yourself.
2. Change the wording, add remarks or adjust the names under the signatures.
3. Click **Save Changes** (or press `Ctrl` + `S`). Downloads use the saved version; if you try to download with unsaved changes, the page offers to save them first.
4. Choose the paper size and click **PDF Print** or **MS Word**.

The Preview & Edit Stock Card page works the same way.

Figure 24. *Below the report: the paper size and the file format. Downloads use the saved version of the report.*

> **Editing the report does not change your stock**
>
> Changes made in the editor only change the copy you download. The Stock Card, the Summary Report on screen and future reports keep the original figures. To correct a quantity or cost for good, use **Edit Mode** on the Summary Report or the Stockcard Ledger (see Correcting entries), then export again or click **Rebuild from Data**.

> **Download before you leave the page**
>
> Edits are kept only while the Preview & Edit page is open; the page asks first if you try to leave with edits. To drop your changes and start again from the recorded figures, click **Rebuild from Data**. **Back to Report** returns to the Summary Report with the same month and filters.

> The names under Prepared by, Verified by and Noted by come from **Report Signatories**, which your manager sets once (see Chapter 5).

CHAPTER 5

Manager Guide

Manager

You can do everything in Chapter 4, and you also run your office. Most of this chapter happens in **Menu → Office Settings**.

Approving and managing accounts

Menu → Office Settings → Users

New sign-ups for your office appear as **New applicant** under the bell, and the number next to **Office Settings** shows how many are waiting.

- **Activate** a pending account to let the person sign in, or **Decline** a sign-up that shouldn't have access.
- **Deactivate** an account that should no longer sign in. The person is signed out at once. You can activate it again later.

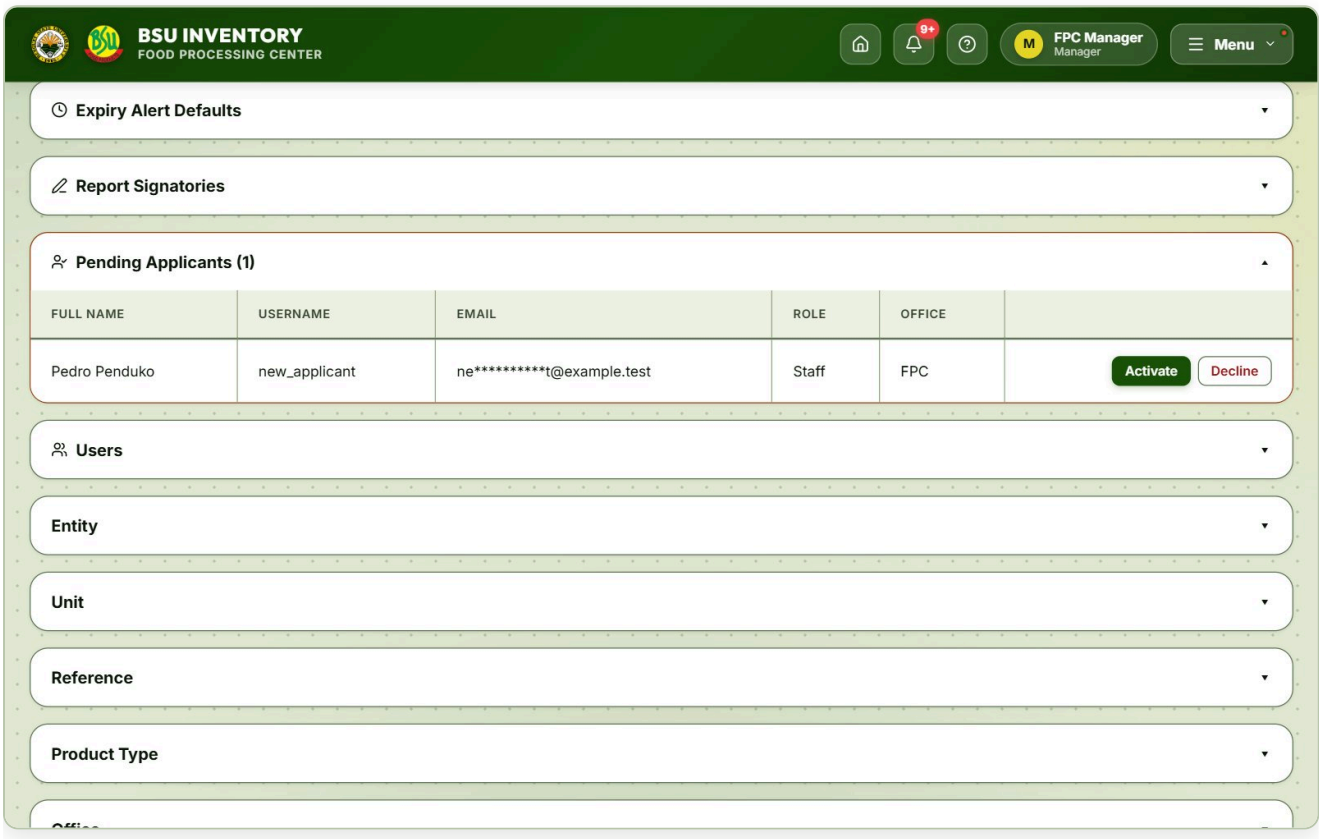

Figure 25. *Office Settings: a sign-up waiting under Pending Applicants, and the other sections (Users, Entity, Unit, Reference, Product Type, Office).*

> **What managers don't change**
> You see the custodian and staff accounts of your office. Other managers' accounts, and account details (name, username, role, office, temporary passwords), are handled by technical staff.

Office lists

Office Settings → Entity, Unit, Reference, Product Type, Office

These are the choices that appear in forms and reports. Open a section, then use **+ Add**, **Edit** or **Delete**. Closing the add or edit window after changing a value asks **"Discard your changes?"** first.

List	Used for
Entity	The entity name and fund cluster printed on stock cards (by default Benguet State University, fund cluster 06).
Unit	Units of measure (kg, pcs, ream…).
Reference	Reference documents on stock movements (RIS, PO, SI…).
Product Type	Groups products in lists and reports.
Office	Offices that stock is issued to.

Expiry alert defaults

Office Settings → Expiry Alert Defaults

Set how many days before expiry the system starts warning about a batch. Products can also have their own thresholds (see Products).

Report signatories

Office Settings → Report Signatories

Enter the names for **Prepared by**, **Verified by** and **Noted by** once. They are printed on your office's exported reports.

Backups and restore

Office Settings → Data Backup & Restore

Making a backup

1. Choose what to include and click **Create backup**.
2. Turn on **password protection** for any copy that leaves this computer (USB drive, email). Only protected backups keep users' passwords.
3. Download the file and keep it somewhere safe.

Automatic backups

Set how often automatic backups run and where they are saved. A second drive is recommended, so a copy survives if the first drive fails. These settings apply to your office only.

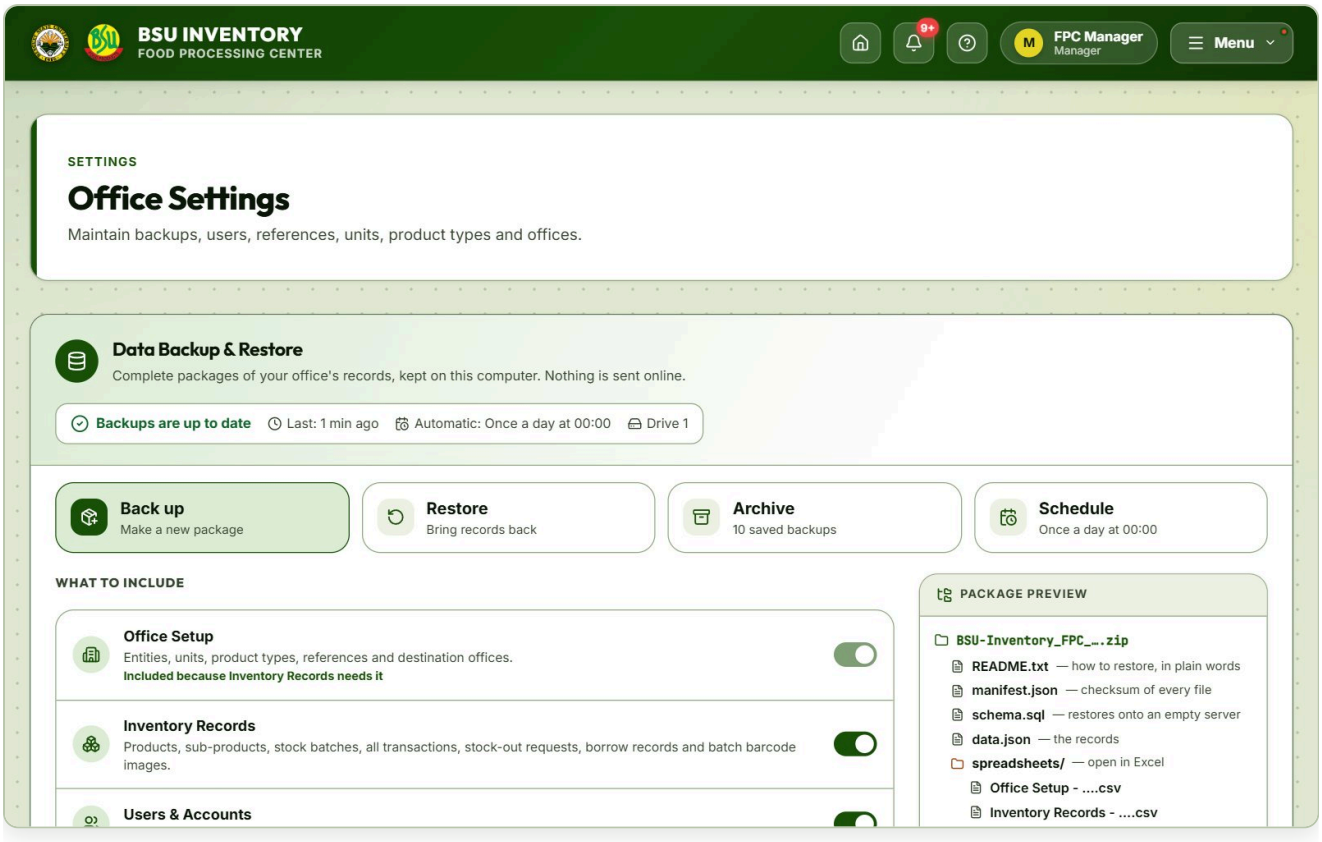

Figure 26. *Data Backup & Restore: back up, restore, the saved backups (Archive) and the automatic schedule.*

Restoring

1. Choose a saved backup or a backup file.
2. Check what it contains, and pick the parts to restore.
3. Enter its password if it is protected, and confirm. A safety backup of the current data is made first.

> **Keep backup passwords safe**
> A protected backup can't be restored without its password, and nobody can recover a lost one. Restoring never changes anyone's current password.

Audit log

Menu → Audit Log

Every sign-in, failed sign-in, stock movement, correction, approval, backup and settings change of your office is listed with the person and the time. Filter by kind of action and dates, or search by user or item. Corrections show the values before and after.

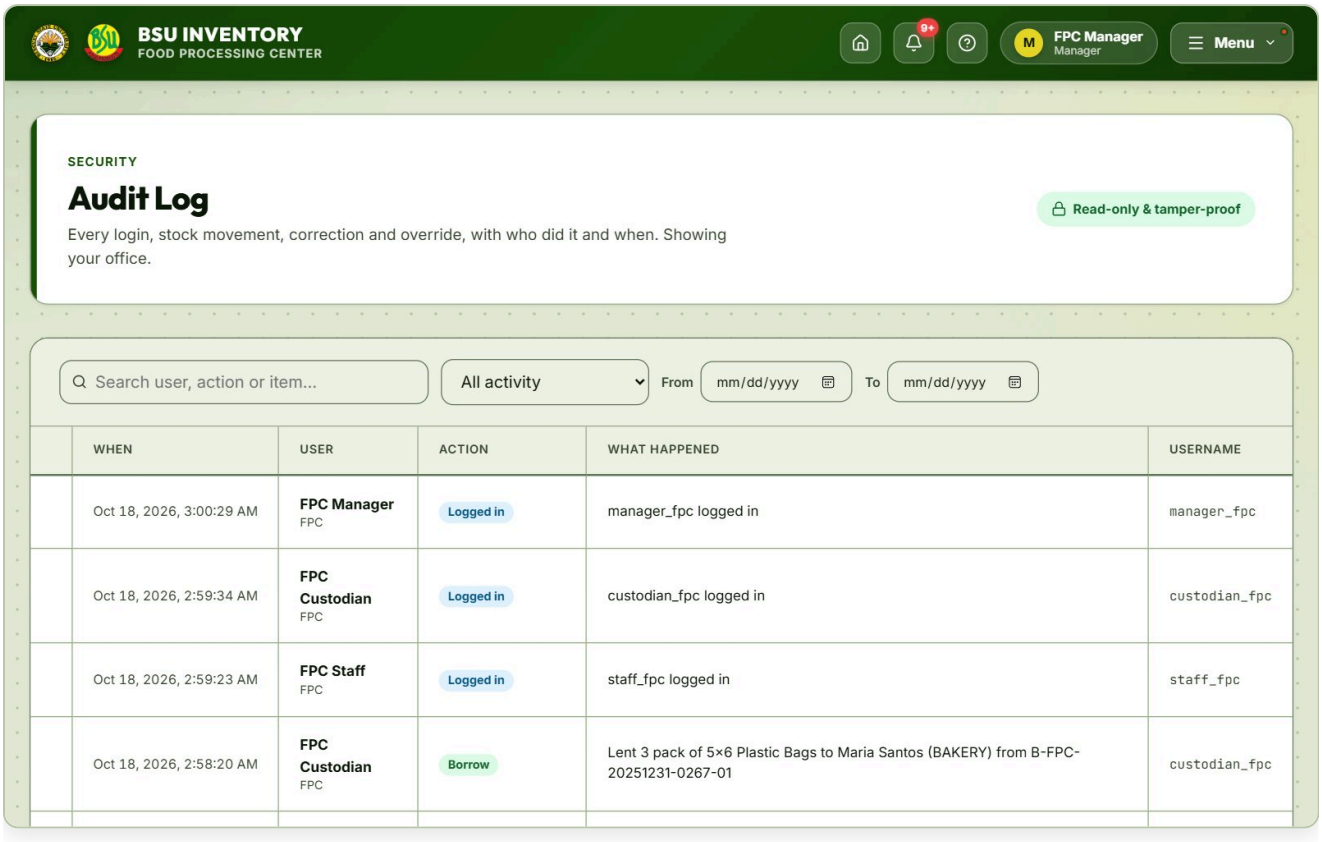

Figure 27. *The Audit Log: who did what, and when.*

The audit log can't be edited or deleted by anyone, including managers and technical staff.

CHAPTER 6

Technical Staff Guide

Technical Staff

You look after accounts and offices across the whole system. Inventory pages are not shown to your account.

First sign-in: the system email

After changing your password, you are asked to **Configure System Email**. This Gmail account sends the password-reset codes and email confirmations for every user.

1. Create or choose a Gmail (or BSU Google) account for the system. Turn on 2-Step Verification for it.
2. In that Google account, go to **Security** → **2-Step Verification** → **App passwords** and create an app password.
3. Enter the email address and the **Gmail App Password**, and save. The system sends a confirmation email to check them before saving.

> The app password is stored encrypted. If it is changed or removed in Google, password resets stop working until you enter the new one.

User management

Menu → User Management

- **Pending Activation:** new sign-ups, with the role and office they requested. **Activate** or **Decline** them. Manager sign-ups can only be handled here.
- **Edit:** change a user's name, username, role or assigned office, or set a **temporary password**. The user must choose their own password at their next sign-in.
- **Deactivate / Activate:** a deactivated user is signed out at once.

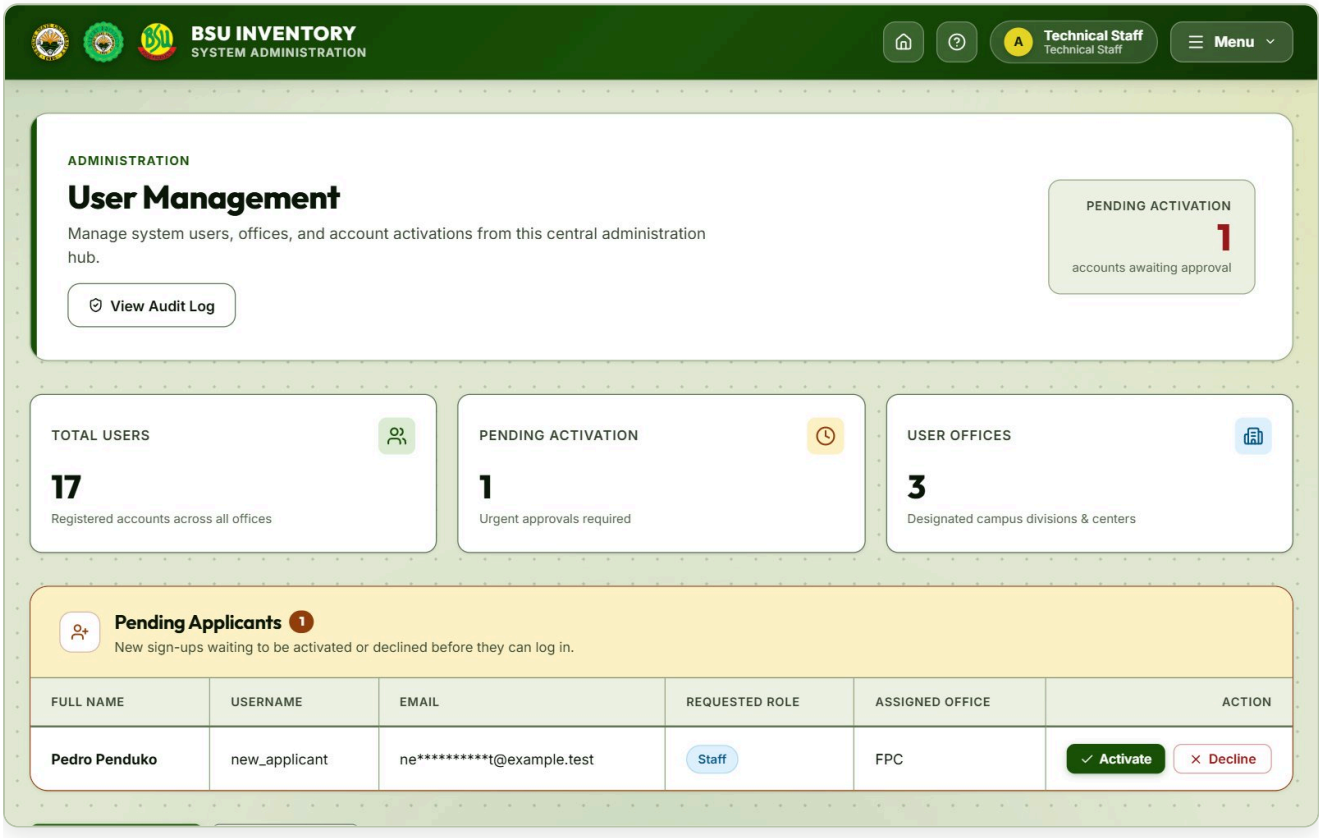

Figure 28. *User Management: the number of users and offices, and new sign-ups to activate or decline.*

> Technical staff accounts are marked **Protected**: they can't be deactivated, declined or deleted.

User offices

Add or edit the user offices (for example BAKERY and FPC). Each office keeps its own products, stock and reports, and every custodian, manager and staff account belongs to one office.

Audit log of all offices

Open the Audit Log from the button on User Management. You see the activity of every office.

A locked-out technical staff account

If no technical staff account can sign in, someone with access to the server PC can set a new temporary password from a command prompt in the system's `backend` folder:

```
php spark user:reset-password <username>
```

CHAPTER 7

Notifications and Alerts

The bell in the top bar collects everything that needs your attention, in three tabs. It updates by itself within seconds, and new requests, decisions and sign-ups also pop up briefly at the bottom of the screen.

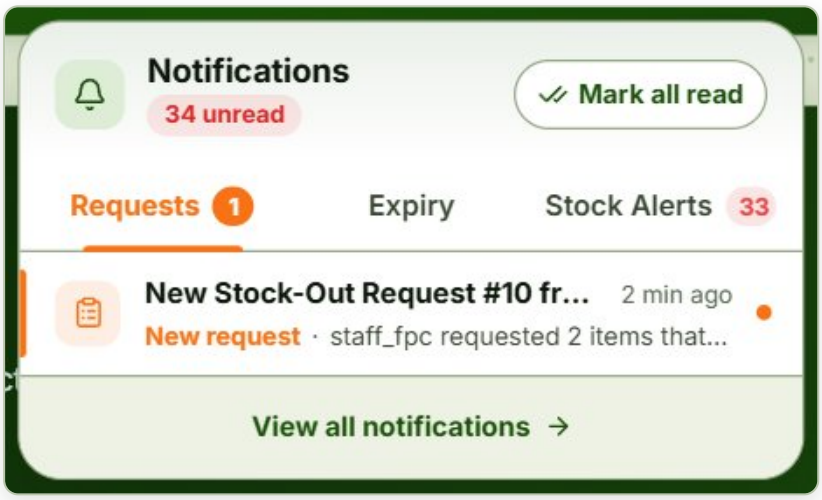

Figure 29. *The bell: Requests, Expiry and Stock Alerts tabs.*

Tab	Notification	Meaning
Requests	New request	A staff member submitted a stock-out request (custodians and managers).
	Accepted / Rejected	A decision was made on your request (staff).
	New applicant	Someone signed up and is waiting for activation (managers, technical staff).
Expiry	Expiring	A batch is within the product's expiry warning threshold.
	Expiry reminder	The batch expires in 3 days.
	Expired	The batch has expired. Use it no longer; record it with Adjust Out.
Stock Alerts	Low stock	The product has reached its reorder point.
	Out of stock	Nothing is left.
	Borrowed	Items lent to another office are still out.

Use expiring batches first, and record expired ones with **Adjust Out** (reason: Spoiled or Others) so the stock on hand stays accurate.

CHAPTER 8

Questions and Troubleshooting

Why was I signed out?

After 15 minutes without activity, 24 hours after signing in, when your password was changed (here or on another device), or when your account was deactivated. Sign in again to continue.

It says my login is locked.

Too many wrong passwords were tried from your device. Wait 15 minutes or sign in from another device. If you forgot the password, use **Forgot Password?**.

I didn't receive the password-reset code.

Check your spam folder and that you typed the email address on your account. The code is valid for 15 minutes; click **Send a new code** for a fresh one. If emails still don't arrive, ask technical staff: the system email may need its app password updated.

Why is my email shown with stars?

Email addresses are shown partly hidden for privacy. To use a different address, change it on My Profile.

I recorded a wrong quantity. Can I fix it?

Yes. On the Stockcard Ledger, use the edit button on that row, or turn on Edit Mode to fix several rows at once. The change is kept in the audit log.

"Save changes" says nothing was saved.

One of your changes is not possible, for example it would make stock go below zero or it uses a future date. The bar names the change. Correct it, then save again; everything else you changed is still there.

The Excel import is locked.

The message next to the Import button says why. Either there are **problems to fix** (correct them, or tick "Leave out the products with problems"), or there are **guesses to confirm** (click Accept for each group, or Accept all guesses). Then choose how to import.

Why does it ask “Discard your changes?” when I click Cancel?

You entered or changed something in that window that is not saved yet. Click **Keep editing** to go back and save it, or **Discard changes** to close the window without saving. See Closing a window without saving.

Do I have to refresh to see new requests?

No. Pages and the bell update by themselves within a few seconds of someone else's change, and new requests pop up at the bottom of the screen.

The camera button doesn't scan.

Open the system with its `https://` address and allow the browser to use the camera. On a computer, a USB or wireless barcode scanner always works in the search boxes.

Someone needs a new account or a password reset.

They can sign up on the sign-in page with **Create a New Account**; the office manager then activates it. If they can't reset their password by email, technical staff can set a temporary password for them.

A new user signed up. How do I let them in?

New sign-ups appear as **New applicant** under the bell. Activate the account in Office Settings (managers) or User Management (technical staff).

CHAPTER 9

Who Can Do What

Task	Staff	Custodian	Manager	Technical Staff
Dashboard and transaction log	✓	✓	✓	Dashboard
Browse the item catalog	✓	✓	✓	—
